Matlab Code For Radio Over Fiber:

Fiber Bragg Grating Based Sensors and Systems Oleg Morozov, 2021-08-18 This book is a collection of papers that originated as a Special Issue focused on some recent advances related to fiber Bragg grating based sensors and systems. Conventionally, this book can be divided into three parts: intelligent systems, new types of sensors, and original interrogators. The intelligent systems presented include evaluation of strain transition properties between cast-in FBGs and cast aluminum during uniaxial straining, multi-point strain measurements on a containment vessel, damage detection methods based on long-gauge FBG for highway bridges, evaluation of a coupled sequential approach for rotorcraft landing simulation, wearable hand modules, and real-time tracking algorithms for measuring finger joint angles of different hand sizes and glaze icing detection of 110 kV composite insulators. New types of sensors are reflected in multi-addressed fiber Bragg structures for microwave photonic sensor systems, its applications in load sensing, wheel hub bearings, and more complex influence in problems of generation of vortex optical beams based on chiral fiber optic periodic structures. Original interrogators include research in optical designs with curved detectors for FBG interrogation, monitors, demonstration of a filterless multi-point and temperature-independent FBG dynamical demodulator using pulse width modulation and dual wavelength differential detection of FBG sensors with a pulsed DFB laser.
