Handbook of Geometric Constraint Systems Principles Meera Sitharam, Audrey St. John, Jessica Sidman, 2018-07-20
The Handbook of Geometric Constraint Systems Principles is an entry point to the currently used principal mathematical and computational tools and techniques of the geometric constraint system GCS. It functions as a single source containing the core principles and results accessible to both beginners and experts. The handbook provides a guide for students learning basic concepts as well as experts looking to pinpoint specific results or approaches in the broad landscape. As such, the editors created this handbook to serve as a useful tool for navigating the varied concepts, approaches, and results found in GCS research.

Key Features: A comprehensive reference handbook authored by top researchers. Includes fundamentals and techniques from multiple perspectives that span several research communities. Provides recent results and a graded program of open problems and conjectures. Can be used for senior undergraduate or graduate topics course introduction to the area. Detailed list of figures and tables.

About the Editors: Meera Sitharam is currently an Associate Professor at the University of Florida's Department of Computer Information Science and Engineering. She received her Ph.D. at the University of Wisconsin-Madison. Audrey St. John is an Associate Professor of Computer Science at Mount Holyoke College who received her Ph.D. from UMass Amherst. Jessica Sidman is a Professor of Mathematics on the John S. Kennedy Foundation at Mount Holyoke College. She received her Ph.D. from the University of Michigan.

Automated Deduction in Geometry Franz Winkler, 2004-05-06
This book constitutes the thoroughly refereed post-proceedings of the 4th International Workshop on Automated Deduction in Geometry ADG 2002 held at Hagenberg Castle, Austria, in September 2002. The 13 revised full papers presented were carefully selected during two rounds of reviewing and improvement. Among the issues addressed are theoretical and methodological topics such as the resolution of singularities, algebraic geometry, and computer algebra. Various geometric theorem proving systems are explored, and applications of automated deduction in geometry are demonstrated in fields like computer-aided design and robotics.

Mathematics Teachers at Work Janine T. Remillard, Beth A. Herbel-Eisenmann, Gwendolyn M. Lloyd, 2011-09-20
This book compiles and synthesizes existing research on teachers' use of mathematics curriculum materials and the impact of curriculum materials on teaching and teachers with a particular emphasis on, but not restricted to, those materials developed in the 1990s in response to the NCTM's Principles and Standards for School Mathematics. Despite the substantial amount of curriculum development activity over the last 15 years and growing scholarly interest in their use, the book represents the first compilation of research on teachers and mathematics curriculum materials and the first volume with this focus in any content area in several decades.

Geometry is at the core of

understanding and reasoning about the form of physical objects and spatial relations which are now recognized to be crucial to many applications in artificial intelligence The 20 contributions in this book discuss research in geometric reasoning and its applications to robot path planning vision and solid modeling During the 1950s when the field of artificial intelligence was emerging there were significant attempts to develop computer programs to mechanically perform geometric reasoning This research activity soon stagnated because the classical AI approaches of rule based inference and heuristic search failed to produce impressive geometric reasoning ability The extensive research reported in this book along with supplementary review articles reflects a renaissance of interest in recent developments in algebraic approaches to geometric reasoning that can be used to automatically prove many difficult plane geometry theorems in a few seconds on a computer Deepak Kapur is Professor in the Department of Computer Science at the State University of New York Albany Joseph L Mundy is a Coolidge Fellow at the Research and Development Center at General Electric Geometric Reasoning is included in the series Special Issues from Artificial Intelligence An International Journal A Bradford Book **The School World** ,1904 **IJCAI-89** International Joint Conferences on Artificial Intelligence,1989 **Final Report of the National Committee of Fifteen on Geometry Syllabus** National Education Association of the United States.
