Response in the Living and Non-Living Jagadish Chandra Bose,2017-07-20 SIR

JAGADISH CHANDRA BOSE was one of the first scientists in the world to undertake interdisciplinary research by looking at plants from the vantage point of physics He subjected plant and animal tissues to various kinds of stimulus and found that they all showed an electric response Finding that this reaction occurred in metals as well as plants and animals he then proceeded to study the differences in response under various conditions He found that all materials are numbed by cold intoxicated by alcohol wearied by excessive work stupefied by anesthetics excited by electric currents stung by physical blows and killed by poison They all exhibit essentially the same reactions of fatigue and depression together with the capacity for recovery and strength and also permanent unresponsiveness or death All materials are responsive or unresponsive under the same conditions and in the same manner His investigations showed that in the entire range of responses regardless of whether the subject is metallic plant or animal there are no exceptions The living response in all its diverse modifications is a repetition of the responses seen in the inorganic Further the nature of the response is determined not by the play of an unknowable and arbitrary vital force but by laws that do not change and act equally and uniformly throughout both organic and inorganic matter This realization was always at the core of his work He sought to show that all materials react to their

environments according to the same laws in other words everything exists in the same field of consciousness Om Namah Shivaya This book was originally published in 1902 Contents Introduction by Paramahansa Yogananda from Autobiography of a Yogi 1 The mechanical response of living substances 2 Electric response 3 Electric response in plants method of negative variation 4 Electric response in plants block method 5 Plant response on the effects of single stimulus and of superposed stimuli 6 Plant response on diphasic variation 7 Plant response on the relation between stimulus and response 8 Plant response on the influence of temperature 9 Plant response effect of anaesthetics and poisons 10 Response in metals 11 Inorganic response modified apparatus to exhibit response in metals 12 Inorganic response method of ensuring consistent results 13 Inorganic response molecular mobility its influence on response 14 Inorganic response fatigue staircase and modified response 15 Inorganic response relation between stimulus and response 16 Inorganic response effect of chemical reagents 17 On the stimulus of light and retinal currents 18 Inorganic response influence of various conditions on the response to stimulus of light 19 Visual analogues Effect of light of short duration 20 Conclusion Collected Physical Papers of Sir Jagadish Chandra Bose Jagadis Chandra Bose,1927 Jagdishchandra Bose Amar Chitra Katha, **Jagadis Chandra Bose and the Indian Response to Western Science** Subrata Dasgupta,1999 This book is the first comprehensive critical study of Jagadis Chandra Bose s science and philosophy of science in the context of Western scientific culture Drawing mainly on primary scientific literature and unpublished archival material it describes Bose s precise contribution to physics radio and biology Unsung Genius Kunal Ghosh,2022 *Jagadish Chandra Bose* ,2024 **Sir Jagadis Chunder Bose His Life and Speeches** Jagadish Chandra Bose,2020-07-30 Reproduction of the original Sir Jagadis Chunder Bose His Life and Speeches by Jagadish Chandra Bose **The Man Who Made Plants Write** Jagadish Chandra Bose,2026-03-17 An internationally celebrated poet and critic brings Jagadish Chandra Bose s revolutionary writings on plant sentience and communication to English readers for the first time Jagadish Chandra Bose 1858 1937 was a Bengali scientist and polymath who developed a theory of plant communication more than a century before Western scientists began to explore such ideas Bose suggested that plants had their own vocabulary an unvoiced life that he recorded as a script with a crescograph and other devices he invented to measure how plants respond to each other and their environments Inviting readers into the resounding silence of the green plant kingdom he described an underlying unity beneath the multiplicity of phenomena and a world in which endless music is sung everywhere Dismissed as idiosyncratic and unscientific when he was alive Bose provocatively challenged the hierarchy of living beings which relegated plants to the bottom and created a mesmerizing body of work on nonhuman intelligence whose originality and significance we at last are able to appreciate today Through her lyrical translations and selections from Bose s essay collection *Abyakta The Unsaid* 1922 Sumana Roy reveals the revolutionary character of his mind as poetic and philosophical as it was scientific Roy the author of *How I Became a Tree* shows how Bose s work can shape how we understand ourselves as a species living alongside and inside the plant world
