

## 5 Points of Darwin's Natural Selection

Read the following situations below and identify the 5 points of Darwin's natural selection.

1) There are 2 types of worms: worms that eat at night (nocturnal) and worms that eat during the day (diurnal). The birds eat during the day and seem to be eating ONLY the diurnal worms. The nocturnal worms are in their burrows during this time. Each spring when the worms reproduce, they have about 500 babies but only 100 of these 500 ever become old enough to reproduce.

a. What worm has natural selection selected AGAINST? diurnal worms FOR? nocturnal worms

b. Darwin's 5 points: Identify the 5 points in the scenario above.

Population has variations. There are 2 types of worms in the area (diurnal and nocturnal)

Some variations are favorable. Birds do not eat nocturnal worms (nocturnal worms advantage)

More offspring are produced than survive. 100 of the original 500 worms survive to reproduce

Those that survive have favorable traits. More nocturnal worms survive and reproduce

A population will change over time. Nocturnal worm population increases; diurnal worm population decreases

2) There are 3 types of polar bears: ones with thick coats, ones with thin coats and ones with medium coats. It is fall, soon to be winter. The temperatures are dropping rapidly and the bears must be kept warm, or they will freeze to death. Many of the bears have had 2 cubs each but due to the extreme temperatures, many mothers only have one cub left.

a. What bear will natural selection select AGAINST? thin coats FOR? thick coats

b. Darwin's 5 points: Identify the 5 points in the scenario above.

Population has variations. There are 3 types of bears (thick, medium, and thin)

## **Evolution And Selection Answer Key:**

The Emergence and Evolution of Religion Jonathan Turner, Alexandra Maryanski, Anders Klostergaard Petersen, Armin W. Geertz, 2017-08-10 Written by leading theorists and empirical researchers this book presents new ways of addressing the old question Why did religion first emerge and then continue to evolve in all human societies The authors of the book each with a different background across the social sciences and humanities assimilate conceptual leads and empirical findings from anthropology evolutionary biology evolutionary sociology neurology primate behavioral studies explanations of human interaction and group dynamics and a wide range of religious scholarship to construct a deeper and more powerful explanation of the origins and subsequent evolutionary development of religions than can currently be found in what is now vast literature While explaining religion has been a central question in many disciplines for a long time this book draws upon a much wider array of literature to develop a robust and cross disciplinary analysis of religion The book remains true to its subtitle by emphasizing an array of both biological and sociocultural forms of selection dynamics that are fundamental to explaining religion as a universal institution in human societies In addition to Darwinian selection which can explain the biology and neurology of religion the book outlines a set of four additional types of sociocultural natural selection that can fill out the explanation of why religion first emerged as an institutional system in human societies and why it has continued to evolve over the last 300 000 years of societal evolution These sociocultural forms of natural selection are labeled by the names of the early sociologists who first emphasized them and they can be seen as a necessary supplement to the type of natural selection theorized by Charles Darwin Explanations of religion that remain in the shadow cast by Darwin's great insights will it is argued remain narrow and incomplete when explaining a robust sociocultural phenomenon like religion

Lima-de-Faria, 1988 The interpretation of evolution is in a state of upheaval the rapid advancement of Molecular Biology has led into question many of the tenets of Darwinism and neo Darwinism which although valuable approaches at the time they were formulated never fulfilled the criteria demanded by real scientific theories In this lucidly written new book now available in paperback the author presents and discusses the rapid developments in particle physics crystallography and molecular biology and formulates a radically different approach to biological evolution This treatise is not offered as one more new theory but a radically different approach In the author's opinion no real theory of evolution can be formulated at present Selection is not the mechanism of evolution for the simple reason that it cannot be weighed on a balance poured into a vial or measured in specific units Only a material component can be the mechanism of evolution and this must be searched for in the strict physico chemical processes    *Valsiner: Handbook of Developmental (c) Psychology* Jaan Valsiner Kevin J. Lancaster University The Handbook of Developmental Psychology is a comprehensive authoritative yet frontier pushing overview of the study of human development presented in a single volume format It is ideal for experienced individuals wishing for an up to date survey of the central themes prevalent to developmental psychology both past and present and for those seeking a reference work to help appreciate the subject for the first time The insightful contributions from world leading developmental psychologists successfully and usefully integrate different perspectives to studying the subject following a systematic life span structure from pre natal development through to old age in human beings The Handbook then concludes with a substantive section on the methodological approaches to the study of development focusing on both qualitative and quantitative techniques This unique reference work will be hugely influential for anyone needing or wishing for a broad yet enriched understanding of this fascinating subject It will be a particularly invaluable resource for academics and researchers in the fields of developmental psychology education parenting cultural and biological psychology and anthropology    The Princeton Theological Review ,1903 Includes section Reviews of recent literature    The Christian Union Henry Ward Beecher,1889    Later Stone Age Hunters and Gatherers of the Southern Transvaal Lyn Wadley,1978

**Mixed Messages** Robert A. Paul,2015-04-24 Nearly everyone would agree that humans and their societies evolved by natural selection that humans are biologically a single species but societies vary greatly and neither genetic inheritance nor cultural inheritance alone can fully explain humans and their social systems While there is a literature that addresses dual inheritance theory or the coevolution of culture and genetics almost all of it is written from a perspective that accepts the neo Darwinian evolutionary framework but does not give proper weight to social and cultural theory as it has been developed by cultural anthropologists At the same time cultural anthropologists have ignored the question of dual inheritance altogether leaving the theorizing of how it works almost exclusively in the hands of those with a strong biological viewpoint In this book anthropologist and psychoanalyst Robert Paul attempts to reconcile evolutionary and cultural approaches in anthropology through a comparative ethnographic exploration of how humans receive behavioral instructions from two separate channels the genetic code carried in the DNA and the symbolic systems that constitute culture He develops a dual inheritance model that aims to do justice to both the genetic and cultural channels of inheritance Paul elaborates his model of the relationship between genes and cultural symbols and then shows how it can make sense of both the similarities and variations found in human social life as captured in the now very extensive ethnographic record He argues that cultural systems evolve to manage intra group competition that would ensue from the genetic program pursuing its interests The book uses thick descriptions and heavy interpretations from the ethnographic record to demonstrate how different societies tackle this challenge The book fills a niche connecting the dual inheritance literature and symbolic cultural anthropology using insights from the former to detect patterns in the latter This is a rare and well researched project and should receive a

broad readership among biological and cultural anthropologists and students of human nature more broadly **Biology**
