Matrix Algebra: Exercises and Solutions David A. Harville, 2011-06-27 This book comprises well over three hundred exercises in matrix algebra and their solutions The exercises are taken from my earlier book Matrix Algebra From a Statistician's Perspective They have been restated as necessary to make them comprehensible independently of their source To further insure that the restated exercises have this stand alone property I have included in the front matter a section on terminology and another on notation These sections provide definitions descriptions comments or explanatory material pertaining to certain terms and notational symbols and conventions from Matrix Algebra From a Statistician's Perspective that may be unfamiliar to a nonreader of that book or that may differ in generality or other respects from those to which he/she is accustomed For example the section on terminology includes an entry for scalar and one for matrix These are standard terms but their use herein and in Matrix Algebra From a Statistician's Perspective is restricted to real numbers and to rectangular arrays of real

numbers whereas in various other presentations a scalar may be a complex number or more generally a member of a field and a matrix may be a rectangular array of such entities
