## External structures:

- Follow the right ventricle side of the heart. Look closely and see how you will have a diagonal line off blood vessels that divide the heart. This line is called the **interatrial sulcus**. The half that includes all of the veins (upper) side of the heart is the **left side**. [2]
- Locate the coronary arteries and veins that are on the surface of the heart. [2]
- Find the lines of dark tissue on the top of the heart. These are the **tricuspid veins** and called **auricles**. [2]
- The veins must connect to the pulmonary veins. Place a pencil on pencil on this vessel to mark its place. [2]
- Just beyond the pulmonary veins is the aorta. Dissecting near the heart will reveal a tiny ridge that has a branch off the aorta called the **brachiocephalic artery**. Place a pencil on pencil on the aorta to mark its place. [2]

- Turn the heart so that you are looking at the dorsal side (the back of the heart) and the lungs are on the top of the heart next to the right auricle. Place the fingers near the lungs. Place a pencil on this vessel, until they place one your finger to turn the aorta off the right side. [2]

- Locate another opening on the backside of the heart on the left side. This is the pulmonary vein. Turn the side of the right side to the aorta by turning the aorta with your finger. Place a pencil on the pulmonary vein opening. [2]

**Other Notes:** After you have the location of each of the following before continuing to the internal structures of the heart:

superior vena cava [2] inferior vena cava [2] aorta [2]

pulmonary arteries and pulmonary veins [2]

left atrium and ventricle [2] right atrium and ventricle [2]

auricles [2] veins [2] coronary arteries & veins [2] interatrial sulcus [2]

- Finally (see last diagram) the vessels which connect to which other:

pulmonary arteries to the **right atrium** \_\_\_\_\_

pulmonary veins to the **left atrium** \_\_\_\_\_

Arteries to the **right atrium** \_\_\_\_\_

Veins from the **right atrium** \_\_\_\_\_
