### **Applications and Efficiency of Heat Pump Systems** Ian E.

Smith, 2013-11-11 The papers in this collection have originated from Britain Eastern and Western Europe and India with the delegates coming from fifteen countries including a strong contingent from Japan. This indicates a widespread interest in the application of heat pumps. The heat pump suffers from an environmental dichotomy. On the one hand it saves fossil fuel energy thereby reducing CO<sub>2</sub> emissions. On the other hand in the vapour compression form 2 it generally employs CFCs which are destructive to our protective ozone layer as well as contributing to the greenhouse effect. Taking the first heat pumps perhaps have the widest application numerically in the heating and cooling of buildings and an excellent paper describes case studies concerning three large Norwegian hotels. In these heat was pumped from the adjacent river or sea when heating was required and during the summer when cooling became necessary to generate domestic hot water. The heat pumps were installed by SINTEF Refrigeration Engineering Norway and have demonstrated payback periods of about two years. The fractional total energy saving of the three hotels was 30% as a result an impressive figure indeed. A similar paper by a Belgian architectural consortium shows how this technique can be successfully applied to the cooling of a large television complex where considerable quantities of heat were being generated by the luminaries. In this exercise the cooling load was successfully pumped to provide hot water

### Heat Pumps for Energy Efficiency and Environmental Progress J.

Bosma, 2012-12-02 The 70 papers collected in this volume present an up to date review of the trends in heat pump technology. The heat pump is reviewed both as being part of a more comprehensive system and as a refined device providing energy and greenhouse gas emission reductions. Its implementation in a system or process must be carefully considered at an early stage of design or development and process integration is discussed in detail as a valuable tool for industry. The heat pump is proving to be a highly effective energy conserving tool particularly when designed and used as an integral part of a system. Environmental benefits are gained when energy is conserved and heat pumps can make a major contribution in this area. However some heat pumps use working fluids which are environmentally unfriendly and the progress that has been made in the field of alternative refrigerants is reported on. The volume will prove an indispensable reference source on the wide ranging applications that have been developed since the last international conference on such topics as heat pump field trials pilot plants and development programmes
