Life Science Grade 1 exemplar Paper September 2013:

The Coming of Age of Insulin-Signalling in Insects Colin G.H. Steel, Xanthe Vafopoulou, 2015-01-28 The new millennium has seen a major paradigm shift in insect endocrinology. Great advancements are being made which establish that nutrition and growth play a central role in diverse cellular and physiological phenomena during insect development and reproduction. Nutrition affects rates of growth and is mainly regulated by the function of the pathway of insulin-like growth factor signalling. This pathway is highly conserved across species and ultimately regulates rates of cell growth and proliferation in growing organs. Insulin and insulin-like peptides (ILPs) are some of the best studied hormones in the animal kingdom and all share a common structural motif and initiate a wide range of closely similar physiological processes in higher organisms. In insects, nutrition via circulating sugar promotes release of ILPs from brain neurosecretory cells into the haemolymph which act on peripheral tissues and stimulate protein synthesis and cell growth. Therefore, insect ILPs are common mediators between nutrition and growth in insects and are functionally analogous to mammalian insulin. The 1980s and 1990s witnessed great progress in elucidation of the physiological and molecular mechanism of action of numerous insect hormones involved in regulation of growth, development, reproduction and metabolism. But the signals for the initiation or termination of controlled events remained largely unknown. ILPs were first identified from the silkworm *Bombyx mori* and were named bombyxins, but related peptides were soon found in numerous species and their functions elucidated. The insulin signalling pathway is now recognized as a central factor in the timing of cell proliferation, growth, longevity, reproduction and reproductive diapause as well as social behaviour. Recent work has revealed that the insulin signalling pathway is closely integrated with that of various other hormones including ecdysteroids, the juvenile hormones and neuropeptides such as prothoracicotropic hormone. In addition, the pathway is also linked with both circadian daily and photoperiodic seasonal clocks, potentially providing a basis for its timing function. This Research Topic aims to provide the only current collection of recent advances on insect ILPs. We encouraged submissions on all areas related to identification, characterization, regulation and physiological functions of insect ILPs. We welcomed both full and short reviews and original research articles.

Buddhist Visions of the Good Life for All Sallie B. King, 2021-05-30 This book highlights what Buddhism has to offer for living well here and now for individuals, society as a whole, all sentient beings and the planet itself. From the perspectives of a variety of Buddhist thinkers, the book evaluates what a good life is like, what is desirable for human society and ways in which we should live in and with the natural world. By examining this worldly Buddhist philosophy and movements in India, Sri Lanka, Bhutan, the Tibetan diaspora, Korea, Taiwan, Japan and the United States, the book assesses what Buddhists offer for the building of a good society. It explores the proposals and programs made by progressive and widely influential lay and monastic thinkers and activists as well as the works of movement leaders such as Thich Nhat Hanh and Dr B R Ambedkar for the social, economic, political and environmental systems in their various countries. Demonstrating that Buddhism is not solely

a path for the realization of nirvana but also a way of living well here and now this book will be of interest to researchers working on contemporary and modern Buddhism Buddhism and society Asian religion and Engaged Buddhism

The Meritocracy Trap Daniel Markovits, 2020-09-08 A revolutionary new argument from eminent Yale Law professor Daniel Markovits attacking the false promise of meritocracy It is an axiom of American life that advantage should be earned through ability and effort Even as the country divides itself at every turn the meritocratic ideal that social and economic rewards should follow achievement rather than breeding reigns supreme Both Democrats and Republicans insistently repeat meritocratic notions Meritocracy cuts to the heart of who we are It sustains the American dream But what if both up and down the social ladder meritocracy is a sham Today meritocracy has become exactly what it was conceived to resist a mechanism for the concentration and dynastic transmission of wealth and privilege across generations Upward mobility has become a fantasy and the embattled middle classes are now more likely to sink into the working poor than to rise into the professional elite At the same time meritocracy now ensnares even those who manage to claw their way to the top requiring rich adults to work with crushing intensity exploiting their expensive educations in order to extract a return All this is not the result of deviations or retreats from meritocracy but rather stems directly from meritocracy's successes This is the radical argument that Daniel Markovits prosecutes with rare force Markovits is well placed to expose the sham of meritocracy Having spent his life at elite universities he knows from the inside the corrosive system we are trapped within Markovits also knows that if we understand that meritocratic inequality produces near universal harm we can cure it When The Meritocracy Trap reveals the inner workings of the meritocratic machine it also illuminates the first steps outward towards a new world that might once again afford dignity and prosperity to the American people
