computer networking books chapter sequencing follows the bottom up or top down architecture of the 7 layer protocol. This book addresses subsequent steps in this process both horizontally and vertically thus fostering a clearer and deeper understanding through chapters that elaborate on WSN concepts and issues. With such depth this book is intended for a wide audience it is meant to be a helper and motivator for senior undergraduates postgraduates researchers and practitioners. It lays out important concepts and WSN relate applications uses appropriate literature to back research and practical issues and focuses on new trends. Senior undergraduate students can use it to familiarize themselves with conceptual foundations and practical project implementations. For graduate students and researchers test beds and simulators provide vital insights into analysis methods and tools for WSNs. Lastly in addition to applications and deployment practitioners will be able to learn more about WSN manufacturers and components within several platforms and test beds.

Conductor: Distributed Adaptation for Heterogeneous Networks Mark D. Yarvis, Peter Reiher, Gerald J. Popek, 2002-05-31. Internet heterogeneity is driving a new challenge in application development adaptive software. Together with the increased Internet capacity and new access technologies network congestion and the use of older technologies wireless access and peer to peer networking are increasing the heterogeneity of the Internet. Applications should provide gracefully degraded levels of service when network conditions are poor and enhanced services when network conditions exceed expectations. Existing adaptive technologies which are primarily end to end or proxy based and often focus on a single deficient link can perform poorly in heterogeneous networks. Instead heterogeneous networks frequently require multiple coordinated and distributed remedial actions.

Conductor Distributed Adaptation for Heterogeneous Networks describes a new approach to graceful degradation in the face of network heterogeneity distributed adaptation in which adaptive code is deployed at multiple points within a network. The feasibility of this approach is demonstrated by conductor a middleware framework that enables distributed adaptation of connection oriented application level protocols. By adapting protocols conductor provides application transparent adaptation supporting both existing applications and applications designed with adaptation in mind. Conductor Distributed Adaptation for Heterogeneous Networks introduces new techniques that enable distributed adaptation making it automatic reliable and secure. In particular we introduce the notion of semantic segmentation which maintains exactly once delivery of the semantic elements of a data stream while allowing the stream to be arbitrarily adapted in transit. We also introduce a secure architecture for automatic adaptor selection protecting user data from unauthorized adaptation. These techniques are described both in the context of conductor and in the broader context of distributed systems. Finally this book presents empirical evidence from several case studies indicating that distributed adaptation can allow applications to degrade gracefully in heterogeneous networks providing a higher quality of service to users than other adaptive techniques. Further experimental results indicate that the proposed techniques can be employed without excessive cost. Thus distributed adaptation is both practical and beneficial.
