Landfill Sites 'Will Reach Capacity in Five Years'

NOWHERE TO PUT THE RUBBISH IN 2010

Wendell Roelf – Sapa

Cape Times – Friday, August 26, 2005

Cape Town faces a filthy future as the city's six major landfill sites are expected to reach their capacity in the next five years.

"We have a serious crisis. Imagine what the city will look like in 2010, when refuse trucks collect dirt and have nowhere to put it," said Saliem Haider, acting head of disposal in the City's Solid Waste Department.

Of the six landfill sites, at Coastal Park, Vissershok, Bellville, Faure, Brackenfell and Swartklip, two have already been shut down.

After the closure of Swartklip and Brackenfell, hundreds of thousands of tons of waste have been transferred to the remaining sites, considerably shortening their lifespan.

For example, Coastal Park has a recommended lifespan of 15 years and Vissershok six years without a proposed northern extension. But now, with Faure expected to close next year, their lifespan will reduce to five years each.

The city was conducting at least 13 specialist studies, which include the impact of air and ground-water pollution and infrastructure accessibility, on two sites for a proposed regional landfill site – one at Kalbaskraal and another South of Atlantis.

"These sites will only become operational at the earliest in 2011, which means that in 2010 the city won't have an inch of legal space to put its waste," said Haider. He said the city needed to buy at least 500ha of land for the new regional site, which would operate for a minimum of 30 years. Compounding the precarious situation was the possible closure in September 2006 of the Bellville South Landfill Site.

The City had successfully appealed against a provincial decision two years ago supporting the closure, but now needed clarity on the way forwarded from environment MEC Tasneem Essop, whose spokeswoman Lynnette Johns said Essop would visit the site next week.

Revealing Media Bias in News Articles Felix Hamborg, 2023-02-24 This open access book presents an interdisciplinary approach to reveal biases in English news articles reporting on a given political event. The approach named person oriented framing analysis identifies the coverage's different perspectives on the event by assessing how articles portray the persons involved in the event. In contrast to prior automated approaches, the identified frames are more meaningful and substantially present in person oriented news coverage. The book is structured in seven chapters. Chapter 1 presents a few of the severe problems caused by slanted news coverage and identifies the research gap that motivated the research described in this thesis. Chapter 2 discusses manual analysis concepts and exemplary studies from the social sciences and automated approaches mostly from computer science and computational linguistics to analyze and reveal media bias. This way it identifies the strengths and weaknesses of current approaches for identifying and revealing media bias. Chapter 3 discusses the solution design space to address the identified research gap and introduces person oriented framing analysis (PFA), a new approach to identify substantial frames and to reveal slanted news coverage. Chapters 4 and 5 detail target concept analysis and frame identification, the first and second component of PFA. Chapter 5 also introduces the first large scale dataset and a novel model for target dependent sentiment classification (TSC) in the news domain. Eventually, Chapter 6 introduces Newsalyze, a prototype system to reveal biases to non expert news consumers by using the PFA approach. In the end, Chapter 7 summarizes the thesis and discusses the strengths and weaknesses of the thesis to derive ideas for future research on media bias. This book mainly targets researchers and graduate students from computer science, computational linguistics, political science, and further social sciences who want to get an overview of the relevant state of the art in the other related disciplines and understand and tackle the issue of bias from a more effective interdisciplinary viewpoint.
