without receiving an answer For this reason when not at the glass himself he will cause his men or any one on duty at the station to keep a regular glass watch assigning the men by turns and fixing particular hours for each that responsibility for neglect may be easily traced These details will relieve each other every two or four hours day and night The watchman on duty must be seated at the glass and before assuming his station must with the aid of the soldier last on duty make certain that he knows the exact position of the observed station and that it is plainly in the field of the glass This precaution is particularly necessary at night when the least movement of the glass may have thrown the station out of view All **A**
