### **The Generalized Triangle Inequalities in Symmetric Spaces and Buildings with Applications to Algebra**

Michael Kapovich, Bernhard Leeb, John James Millson, 2008 In this paper the authors apply their results on the geometry of polygons in infinitesimal symmetric spaces and symmetric spaces and buildings to four problems in algebraic group theory. Two of these problems are generalizations of the problems of finding the constraints on the eigenvalues resp singular values of a sum resp product when the eigenvalues singular values of each summand factor are fixed. The other two problems are related to the nonvanishing of the structure constants of the spherical Hecke and representation rings associated with a split reductive algebraic group over  $\mathbb{Q}$  and its complex Langlands dual. The authors give a new proof of the Saturation Conjecture for  $GL_n$  as a consequence of their solution of the corresponding saturation problem for the Hecke structure constants for all split reductive algebraic groups over  $\mathbb{Q}$

Rabinowitz, Mark Bowron, 1999 *A Basic Course in Probability Theory* Rabi Bhattacharya, Edward C. Waymire, 2007-07-27 Introductory Probability is a pleasure to read and provides a fine answer to the question How do you construct Brownian motion from scratch given that you are a competent analyst. There are at least two ways to develop probability theory. The more familiar path is to treat it as its own discipline and work from intuitive examples such as coin flips and conundrums such as the Monty Hall problem. An alternative is to first develop measure theory and analysis and then add interpretation. Bhattacharya and Waymire take the second path

These topics also deal with fundamental notions and approaches as with several classical applications of combinatorial optimization. *Paradigms of Combinatorial Optimization* is divided in two parts Paradigmatic Problems that handles several famous combinatorial optimization problems as max cut min coloring optimal satisfiability tsp etc the study of which has largely contributed to both the development the legitimization and the establishment of the Combinatorial Optimization as one of the most active actual scientific domains. Classical and New Approaches that presents the several methodological approaches that fertilize and are fertilized by Combinatorial optimization such as Polynomial Approximation Online Computation Robustness etc and more recently Algorithmic Game Theory

### **Mathematics in Berlin** Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen

Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin. It presents a comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians. Since many towering figures in mathematical history worked in Berlin most of the chapters of this book are concise biographies. These are held together by a

few survey articles presenting the overall development of entire periods of scientific life at Berlin Overlaps between various chapters and differences in style between the chapters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker Weierstrass controversy The book aims at readability rather than scholarly completeness There are no footnotes only references to the individual bibliographies of each chapter Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics
