Text focus is on state of the art technology as well as on the fundamental principles underlying today's technological advances in service and repair procedures. Industry accepted practices are identified and readers are encouraged to formulate a sound understanding of both the why and the how of modern diesel engines and equipment. Thorough up to date treatment of diesel technology encompasses major advancements in the field especially recent developments in the use of electronics in heavy duty trucks, off highway equipment and marine applications. The text's primary focus is on state of the art electronic fuel injection systems such as those being used by such manufacturers as Caterpillar, Cummins, Detroit Diesel, Volvo and Mack. A systematic, structured organization helps readers learn step by step beginning with engine systems and working logically through intake, exhaust, cooling, lubrication and fuel injection systems, highlighting major changes in today's modern engines.

Heavy Vehicle Event Data Recorder Interpretation Christopher D. Armstrong, 2018-11-02 The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include Night Vision Study and Photogrammetry, Vehicle Event Data Recorders, Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction. The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction, appealing to crash analysts, consultants and safety engineers alike.
