**Stock Investing for Beginners** Bradley Banks,2019 As an investor the stock market offers you the opportunity to increase your income without taking on the high risks that are usually associated when venturing in other businesses By selling stocks the company raises capital and is able to expand itself exponentially Therefore as an investor when you purchase shares of a company you have increased the worth of the company Thus it's a win win situation for both investor and owner The negative risk associated with the stock market can be small or large but it all depends on the number of shares of stock that you as an investor have bought Therefore if a company's stock shares lose value the stocks you have bought also loses value and if you decide to sell your stocks when the value is low you will have incurred a loss I will show

you how you can minimize your risks and show you different ways in which investors are not only making money but are also building with the stock market **Investing in Stocks and Shares** John White,2008 **Investing in the Stock Market**

Eric Williams,2019-05-04 What is the Stock Market A certain friend once had a speculative idea of the stock market being a center where people screamed all day He also strongly believed that it was some sort of financial battlefield where you killed or escaped with bruises Thanks to the advent of technology the stock market is technically virtual and physically safe A stock market is a place for the financially wise and disciplined who are willing to make investments for a substantial reward In the subsequent paragraphs the rudiments of trading on the stock market will be extensively discussed What it is the way it works its history and evolution and why you need to invest in it The stock market also called an equity or share market can be likened to a globalized market place But in this case the goods and services virtual provided primarily are termed stocks stocks are basically shares of a company Picture an apple pie representing a company each slice translates to a company's share value a bigger pie promises a generous slice Stocks albeit its popularity are not traded solely on the stock market Other financial securities are involved This could be corporate bonds exchange traded funds etc The perks of owning a share lie in the ability of the company to rake in profits As stated in the apple pie analogy buying stocks is a little risk dependent But greater risks guarantees a greater reward While stocks are said to be the shares in a company's ownership or profits bonds are a debt owed by the company Instead of taking a loan directly from a bank a company being a distinctive legal entity can borrow from individuals These individuals are said to have purchased a bond and bonds pose fewer risks than stocks A company facing bankruptcy would be forced to sell its assets to repay its debts while its shareholders come last The stock market therefore is simply a conglomerate of buyers sellers and intermediaries trading stocks and other financial securities A booming stock market is essential to overall economic stability as it allows companies to access funds from the masses A total of about 69 trillion are traded on the stock market a year surpassing the entire world economy So while money makes the world go round the stock market is the pedestal on which it rotates **Beginners Guide to the Stock Market**
