GUIDE TO GREENER ELECTRONICS

greenpeace.org/electronics

VERSION 14
DECEMBER 2009

NOKIA Ranking = 7.3/10

Nokia stays in 1st place with a slightly reduced score of 7.3, losing a point for failing to do proactive lobbying for the revised RoHS (Restriction of Hazardous Substances in electronics) Directive to adopt a methodology for further restrictions of hazardous substances, and immediately ban chlorinated and brominated substances. As of this version of the Guide, Criterion C1 has been sharpened to require companies not only to have a chemicals policy underpinned by the precautionary principle, but also to support a revision of the RoHS Directive that bans further harmful substances, specifically brominated flame retardants (BFRs), chlorinated flame retardants (CFRs) and PVC vinyl plastic.

Overall, Nokia does best on the toxic chemicals criteria, followed by energy, and does least well on e-waste issues. It gains a point for having almost all its new models of mobile phones free of BFRs. Nokia scores very well on toxic chemical issues; all its new models have been free of PVC since the end of 2005, and it is now aiming to have all new models free of all brominated and chlorinated compounds and antimony trioxide from the start of 2010.

Nokia scores maximum points for its comprehensive voluntary take-back programme, which spans 85 countries providing almost 5,000 collection points for end-of-life mobile phones. It also scores top marks for the information it provides to customers on what to do with their discarded products. However, its recycling rate of 3 to 5 percent is very poor; more information is needed on how Nokia calculates these figures. It also needs to start using recycled plastics beyond just for packaging.

Nokia's score on energy has dropped slightly due to a point lost for failing to clarify concerns about the additionality of its renewable energy purchases and to provide more information about the EU RECs (Renewable Energy Credits) it is buying. It sourced 25 percent of its total energy needs from renewable sources in 2007 and has a target to increase its use of renewable energy to 50 percent by 2010. Top marks (double) are given for product energy efficiency as all but one of its mobile phone chargers exceed the Energy Star requirements by between 30 and 90 percent. It provides a third-party verification certificate for its disclosed CO_2 emissions – however, while it scores full marks for committing to reduce its own absolute CO_2 emissions by a minimum of 10 percent in 2009 and 18 percent in 2010, from a baseline year of 2006, it fails to score any points on its support for global cuts in greenhouse gas (GHG) emissions. Nokia needs to call for GHG emissions to peak by 2015 and for industrialised countries as a group to accept mandatory cuts of at least 30 percent by 2020.
