A student of the famed founder of modern neuroscience with Santiago Ramón y Cajal also serving as the Editor of the original text, Fernando de Castro recorded all the various protocols that had been used in his laboratory by his students in order to provide a manual of histological procedures specifically designed for the fine structure of the nervous system. This renowned text is virtually unknown in its original form outside the Spanish speaking world. In a text that reads like a mix between a recipe book and an alchemical manuscript, authors Miguel Merchán, Javier De Felipe, and Fernando de Castro, descendant of the 1933 publication's author, put the new translation into historical context. This book is also beautifully illustrated with plates of histological techniques, provides a quick guide to new vocabulary, and the author's notes on the translated text. This pivotal work of classic neurohistological techniques is a wonderful addition to the Cajal library.

**Impotence in the Male** Wilhelm Stekel, 1927      *A Short History of Medicine* F. Gonzalez-Crussi, 2007. Presents a brief yet authoritative 500 year history of the science, the philosophy, and the controversies of modern medicine. While this work mainly explores Western medicine, González Crussi also describes how modern medicine's roots extend to both Greco-Roman antiquity and Eastern medical traditions. Covered in detail are the birth of anatomy and the practice of dissections, the transformation of surgery from a gruesome art to a sophisticated medical specialty, a short history of infectious diseases, the evolution of the diagnostic process, advances in obstetrics and anesthesia, and modern psychiatric therapies, and the challenges facing organized medicine today. González Crussi's approach to these and other topics stems from his professed belief that the history of medicine isn't just a continuum of scientific achievement but is deeply influenced by the personalities of the men and women who made or implemented these breakthroughs.
