Cohen, Marcia L. Lightbody, 2007-05-08 The Foundation for Advances in Medicine and Science FAMS the organizers of SCANNING 98 sponsored its third annual Atomic Force Microscopy Scanning Tunneling Microscopy Symposium at the Omni Inner Harbor Hotel in Baltimore Maryland from May 9 to 12 1998 This book represents the compilation of papers that were presented at the AFM STM Symposium as

well as a few that were presented at SCANNING 96 and SCANNING 97 meetings that took place in Monterey California The purpose of the symposium was to provide an interface between scientists and engineers representatives of industry government and academia all of whom have a common interest in probe microscopies The meetings offered an ideal forum where ideas could easily be exchanged and where individuals from diverse fields who are on the cutting edge of probe microscopy research could communicate with one another Experts in probe microscopy from around the world representing a wide range of disciplines including physics biotechnology nanotechnology chemistry material science etc were invited to participate The format of the meeting was structured so as to encourage communication among these individuals During the first day s sessions papers were presented on general topics such as application of scanning probe microscopy in materials science STM and scanning tunneling spectroscopy of organic materials fractal analysis in AFM and nanomanipulation Other papers presented included unexpected ordering of a molecule synthesis of peptides and oligonucleotides and analysis of lunar soils from Apollo 11

Acoustic Scanning Probe Microscopy Francesco Marinello, Daniele Passeri, Enrico Savio, 2012-10-04 The combination of atomic force microscopy with ultrasonic methods allows the nearfield detection of acoustic signals The nondestructive characterization and nanoscale quantitative mapping of surface adhesion and stiffness or friction is possible The aim of this book is to provide a comprehensive review of different scanning probe acoustic techniques including AFM UAFM SNFUH UFM SMM and torsional tapping modes Basic theoretical explanations are given to understand not only the probe dynamics but also the dynamics of tip surface contacts Calibration and enhancement are discussed to better define the performance of the techniques which are also compared with other classical techniques such as nanoindentation or surface acoustic wave Different application fields are described including biological surfaces polymers and thin films

Contact Problems for Soft, Biological and Bioinspired Materials Feodor M. Borodich, Xiaoqing Jin, 2022-04-22 This book contains contributions from leading researchers in biomechanics nanomechanics tribology contact mechanics materials science and applications on various experimental techniques including atomic force microscopy AFM for studying soft biomimetic and biological materials and objects Biologists physicists researchers applying methods of contact mechanics and researchers testing materials using indentation techniques along with many other applied scientists will find this book a useful addition to their libraries Moreover several reviews in this book are written as introductions to several important and rather sophisticated research areas such as depth sensing indentation studying of biological cells by AFM probes mechanics of adhesive contact and contact between viscoelastic hereditary elastic solids The book containing new theoretical models results of experimental studies and numerical simulations along with reviews of above mentioned areas of contact mechanics in application to biological systems would be beneficial for researchers in many areas of biology medicine engineering mechanics and biomimetics

Sihvola, Alexey P. Vinogradov, 2008-12-16 Metamaterials and plasmonics are cross disciplinary fields that are emerging into the mainstream of many scientific areas Examples of scientific and technical fields which are concerned are electrical engineering micro and nanotechnology microwave engineering optics optoelectronics and semiconductor technologies In plasmonics the interplay between propagating electromagnetic waves and free electron oscillations in materials are exploited to create new components and applications On the other hand metamaterials refer to artificial composites in which small artificial elements through their collective interaction creates a desired and unexpected macroscopic response function that is not present in the constituent materials This book charts the state of the art of these fields In May 2008 world leading experts in metamaterials and plasmonics gathered into a NATO Advanced Research Workshop in Marrakech Morocco The present book contains extended versions of 22 of the presentations held in the workshop covering the general aspects of the field as well as design and modelling questions of plasmonics and metamaterials fabrication issues and applications like absorbers and antennas
