candidates pursuing the Cisco Certified Specialist Data Center Design certification by passing the 300 610 DCID exam. Covering all exam objectives, the guide delves into the design principles, best practices, and technologies essential for modern data center infrastructures. Key topics include network design using Cisco Nexus switches, Layer 2 and Layer 3 connectivity, routing protocols, data center interconnect (DCI) solutions, and high availability strategies. The book also explores compute resource design with Cisco UCS, including fabric interconnects, service profiles, and policy-based management, ensuring readers understand how to align compute solutions with business and application requirements. Storage network design is addressed through Fibre Channel FCoE and iSCSI technologies, with guidance on zoning, VSANs, and storage topologies. Virtualization is a critical focus, covering network and compute virtualization with technologies like VXLAN OTV and Cisco ACI. Application-centric infrastructure, security design, automation, and orchestration principles are also included, reflecting current trends in software-defined data centers. Each chapter includes practice questions, configuration examples, and design scenarios to reinforce learning. The guide emphasizes both theoretical knowledge and practical application, helping candidates translate concepts into real-world design solutions. By the end of the book, readers will have a solid foundation to confidently approach the DCID exam and to design resilient, scalable, and secure Cisco data center infrastructures.

Study Guide on Automating and Programming Cisco Data Center Solutions (300-635 DCAUTO) Exam Anand Vemula, The Cisco 300 635 DCAUTO certification focuses on automation and programmability within Cisco Data Center technologies, particularly Cisco ACI NX OS and UCS environments. The exam covers fundamental knowledge of Cisco's Unified Data Center Architecture and dives deep into key components such as the Application Policy Infrastructure Controller (APIC), Leaf and Spine switches in ACI, and the role of Cisco UCS with its management platforms, including Cisco Intersight Central. To the certification, understanding the ACI policy model, which uses tenants, bridge domains, and endpoint groups (EPGs) to logically segment and control network traffic, is essential. Mastery of the ACI object model and REST API is essential, enabling candidates to programmatically manage and automate network policies. The exam also emphasizes practical skills in NX OS programmability, contrasting traditional CLI with modern NX API REST and CLI methods, and highlights the importance of Python scripting alongside NETCONF and RESTCONF protocols. Cisco UCS programmability is explored through UCS Manager's XML APIs, Cisco Intersight's cloud-based device management, and the use of Python SDKs and PowerTool for automation. Candidates learn how to automate workflows using DevOps and Infrastructure as Code (IaC) tools like Ansible and Terraform, integrating these with CI/CD pipelines and Git for streamlined operations. Advanced scripting techniques cover data extraction, reporting, and building automation scripts across Cisco UCS, ACI, and NX OS platforms. Monitoring and logging with telemetry, SNMP, and syslog integration into tools like Splunk and Grafana complete the skill set. Overall, the certification equips network professionals to automate and manage modern data center infrastructures efficiently.
