Operating Systems and Devices: An Overview

- A primary function of any OS is to provide basic I/O support for application software
  - To translate requests from software into commands that the hardware can understand and carry out
- Two ways an OS does this:
  - Through software(device drivers)
  - Through hardware (controllers and adapter boards) controlled by the OS
- Device drivers perform the communication between the physical device and OS
- Adapters are the interface between hardware components (such as display adapters to produce video)
