Geomorphology And Climatology March 2014 Paper 1:

Climate Hazard Crises in Asian Societies and Environments Troy Sternberg, 2017-01-20 Climate hazards are the world's most widespread deadliest and costliest natural disasters. Knowledge of climate hazard dynamics is critical since the impacts of climate change, population growth, development projects and migration affect both the impact and severity of disasters. Current global events highlight how hazards can lead to significant financial losses, increased mortality rates and political instability. This book examines climate hazard crises in contemporary Asia, identifying how hazards from the Middle East through South and Central Asia and China have the power to reshape our globalised world. In an era of changing climates, knowledge of hazard dynamics is essential to mitigating disasters and strengthening livelihoods and societies across Asia. By integrating human exposure to climate factors and disaster episodes, the book explores the environmental forces that drive disasters and their social implications. Focusing on a range of Asian countries, landscapes and themes, the chapters address several scales: province, national, regional. Different hazards: drought, flood, temperature, storms, dust, environments, desert, temperate, mountain, coastal and issues: vulnerability, development, management, politics. To present a diverse comprehensive evaluation of climate hazards in Asia. This book offers an understanding of the challenges climate hazards present, their critical nature and the effort needed to mitigate climate hazards in 21st century Asia. **Climate Hazard Crises in Asian Societies and Environments** is vital reading for those interested and engaged in Asia's development and well-being today and will be of interest to those working in Geography, Development Studies, Environmental Sciences, Sociology and Political Science.

The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co-published with British Society for Geomorphology. This volume is the fifth in the definitive series *The History of the Study of Landforms or the Development of Geomorphology*. Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the classic period of geomorphology (1890-1950). Volume 4 (2008) concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965. By the end of this period, process-based studies had become dominant. Volume 5 builds on this platform, covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century. It is divided into three sections: the first deals with changes in approach and method; the second with changes in ideas and the broader scientific context within which geomorphology is studied; and the final section details advances in research on processes and landforms. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty-first century geomorphology.
