

## 1. Income Statement

### PROBLEMS

1. Power and Light are owned by either a parent or subsidiary, which has a net income of \$600,000. The Power has a noncontrolling interest of 10,000, which makes the parent Power own the Power for 90% rather than just 100% of the power.

### SOLUTIONS

Step 1: List the parent and subsidiary ratios.

Power	noncontrolling interest = 10,000
	parent Power = 90,000
Subsidiary	parent Power = 100,000

Step 2: Write the noncontrolling interest percentage, and cross-multiply to calculate the parent Power. However the parent subsidiary ratios are only known, only the first term of the equation is needed.

$$\frac{\text{noncontrolling interest}}{\text{parent Power}} = \frac{\text{parent Power}}{\text{parent Power}}$$
$$\frac{\text{parent Power} \times \text{noncontrolling interest}}{\text{parent Power}} = \frac{\text{parent Power}}{\text{parent Power}}$$
$$\frac{\text{parent Power} (100,000) \times 10,000}{100,000} = \frac{\text{parent Power}}{\text{parent Power}}$$
$$\frac{\text{parent Power} (100,000) \times 10,000}{100,000} = \frac{\text{parent Power}}{\text{parent Power}}$$

Step 3: Insert the known ratios into the equation, and solve.

$$\frac{\text{parent Power}}{100,000} = \frac{10,000}{10,000}$$
$$\text{parent Power} = 100,000$$

### PROBLEMS

1. An asset is delivered under a finance and leased to a lessee for a noncontrolling interest of 10,000, which has a net income of \$100,000. Does this fit the model? Explain.

\_\_\_\_\_

2. When noncontrolling interest is released and sells to the lessee for \$100,000, the noncontrolling interest (10,000) is \$10,000 = 10% of the parent's net income. What is the parent's net income?

\_\_\_\_\_

3. Are the Power plant assets to be carried within a subsidiary (100% owned), or that asset can be carried within the parent (100%). The parent has a noncontrolling interest
