

**TO INVESTIGATE THE PROCESS OF MEIOSIS**

Organisms produced by sexual reproduction are truly new organisms. They have different sets of genes from their parents. The gametes formed by meiosis are just for the purpose of sexual reproduction. Gametes cannot grow into another organism until they fuse with another gamete to form a zygote. When the zygote forms, it is genetically unique.

Genetic variation allows a species to have a better chance of adapting to and surviving sudden changes in the environment. No two individuals in a sexually reproducing population are exactly the same. Meiosis during sexual reproduction therefore ensures maximum genetic variation and improved the chances of a species' survival.

This study examines the relationship between religious education and health education in Zambia. It provides an overview of religious and health education in Zambia explores the role of religion in promoting health and wellbeing and discusses the potential benefits and challenges of integrating religious and health education in schools. The review draws on a range of literature sources including academic articles, reports and government documents. The findings suggest that while religious education can provide a strong foundation for promoting healthy lifestyles and practices there are also potential risks associated with relying solely on religious teachings for health education. Therefore a more integrated approach that combines both religious and health education is recommended.
