Understanding the characteristics of material contact and lubrication at tribological interfaces is of great importance to engineering researchers and machine designers Traditionally contact and lubrication are separately studied due to technical difficulties although they often coexist in reality and they are actually on the same physical ground Fast research advancements in recent years have enabled the development and application of unified models and numerical approaches to simulate contact and lubrication merging their studies into the domain of Interfacial Mechanics This book provides updated information based on recent research progresses in related areas which includes new concepts theories methods and results for contact and lubrication problems involving elastic or inelastic materials homogeneous or inhomogeneous contacting bodies using stochastic or deterministic models for dealing with rough surfaces It also contains unified models and numerical methods for mixed lubrication studies analyses of interfacial frictional and thermal behaviors as well as theories for studying the effects of multiple fields on interfacial characteristics The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials This book is written primarily for graduate and senior undergraduate students engineers and researchers in the fields of tribology lubrication surface engineering materials science and engineering and mechanical engineering
