Handbook of Research on Politics in the Computer Age Solo, Ashu M. G., 2019-08-30 Technology and particularly the Internet have caused many changes in the realm of politics Aspects of engineering computer science mathematics or natural science can be applied to politics Politicians and candidates use their own websites and social network profiles to get their message out Revolutions in many countries in the Middle East and North Africa have started in large part due to social networking websites such as Facebook and Twitter Social networking has also played a role in protests and riots in numerous countries The mainstream media no longer has a monopoly on political commentary as anybody can set up a blog or post a video online Now political activists can network together online The Handbook of Research on Politics in the Computer Age is a pivotal reference source that serves to increase the understanding of methods for politics in the computer age the effectiveness of these methods and tools for analyzing these methods The book includes research chapters on different aspects of politics with information technology engineering computer science or math from 27 researchers at 20 universities and research organizations in Belgium Brazil Cape Verde Egypt Finland France Hungary Italy Mexico Nigeria Norway Portugal and the United States of America Highlighting topics such as online campaigning and fake news the prospective audience includes but is not limited to researchers political and public policy analysts political scientists engineers computer scientists political campaign managers and staff politicians and their staff political operatives professors students and individuals working in the fields of politics e politics e government new media and communication studies and Internet marketing

Boundary and Interior Layers, Computational and Asymptotic Methods - BAIL 2014 Petr Knobloch, 2016-04-19 This volume offers contributions reflecting a selection of the lectures presented at the international conference BAIL 2014 which was held from 15th to 19th September 2014 at the Charles University in Prague Czech Republic These are devoted to the theoretical and or numerical analysis of problems involving boundary and interior layers and methods for solving these problems numerically The authors are both mathematicians pure and applied and engineers and bring together a large number of interesting ideas The wide variety of topics treated in the contributions provides an excellent overview of current research into the theory and numerical solution of problems involving boundary and interior layers

High Performance Scientific and Engineering Computing Hans-Joachim Bungartz, Franz Durst, Christoph Zenger, 1999-08-18 This volume contains the proceedings of an international conference on high performance scientific and engineering computing held in Munich in March 1998 and organized by FORTWIHR the Bavarian Consortium for High Performance Scientific Computing The 38 contributions cover engineering applications for numerical simulation from the fields fluid flow optimal control crystal growth and semiconductor technology as well as numerical simulation in astrophysics or quantum chemistry In contrast to related collections the reader gets a really interdisciplinary spectrum of the state of the art of selected topics of scientific computing with recent results of research groups from applied mathematics computer

science engineering physics and chemistry *Enterprise Level Security 2* Kevin E. Foltz, William R. Simpson, Institute for Defense Analyses, 2020-09-14 *Enterprise Level Security 2 Advanced Topics in an Uncertain World* follows on from the authors first book on Enterprise Level Security ELS which covered the basic concepts of ELS and the discoveries made during the first eight years of its development This book follows on from this to give a discussion of advanced topics and solutions derived from 16 years of research pilots and operational trials in putting an enterprise system together The chapters cover specific advanced topics derived from painful mistakes and numerous revisions of processes This book covers many of the topics omitted from the first book including multi factor authentication cloud key management enterprise change management entity veracity homomorphic computing device management mobile ad hoc big data mediation and several other topics The ELS model of enterprise security is endorsed by the Secretary of the Air Force for Air Force computing systems and is a candidate for DoD systems under the Joint Information Environment Program The book is intended for enterprise IT architecture developers application developers and IT security professionals This is a unique approach to end to end security and fills a niche in the market *Scientific Modeling and Simulations* Sidney Yip, Tomas Diaz Rubia, 2010-04-07 Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glass bers and gels 2 and diffusive hops of point defects within crystalline alloys 3 *Frontiers and Challenges in Warm Dense Matter* Frank Graziani, Michael P. Desjarlais, Ronald Redmer, Samuel B. Trickey, 2014-04-28 Warm Dense Matter WDM occupies a loosely defined region of phase space intermediate between solid liquid gas and plasma and typically shares characteristics of two or more of these phases WDM is generally associated with the combination of strongly coupled ions and moderately degenerate electrons and careful attention to quantum physics and electronic structure is essential The lack of a small perturbation parameter greatly limits approximate attempts at its accurate description Since WDM resides at the intersection of solid state and high energy density physics many high energy density physics HEDP experiments pass through this difficult region of phase space Thus understanding and modeling WDM is key to the success of experiments on diverse facilities These include the National

Ignition Campaign centered on the National Ignition Facility NIF pulsed power driven experiments on the Z machine ion beam driven WDM experiments on the NDCX II and fundamental WDM research at the Linear Coherent Light Source LCLS Warm Dense Matter is also ubiquitous in planetary science and astrophysics particularly with respect to unresolved questions concerning the structure and age of the gas giants the nature of exosolar planets and the cosmochronology of white dwarf stars In this book we explore established and promising approaches to the modeling of WDM foundational issues concerning the correct theoretical description of WDM and the challenging practical issues of numerically modeling strongly coupled systems with many degrees of freedom
