Abstract Summary: We demonstrate that, contrary to widespread conventional theoretical treatments, the characteristic frequency of a quantum dot is not determined by the dot size, but rather by the strength of the coupling between the dot and the electrodes. This is shown by calculating the differential conductance of a quantum dot coupled to two electrodes, and by comparing the results with experimental data.

1. Values of the **coefficients** growth or loss of the different parts of each individual for the vegetation. The coefficients tell you how many thousands of individuals per hectare are obtained (average) on the average for each of the members of each vegetation or within the vegetation.
