The book's discovery based approach guides students to explore geometric worlds through computer based activities enabling students to make observations, develop conjectures and write mathematical proofs. This unique textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software constructing various geometric figures and investigating their properties, relationships and interactions. The text allows students to gradually build upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices, symmetry in the plane and hyperbolic and projective geometry. Emphasizing active collaborative learning the text contains numerous fully integrated computer lab activities that visualize difficult geometric concepts and facilitate both small
