## **My Lighting Handbook Volume 1 Interior:**

**My Lighting Handbook** Lorenzo Simoni, 2014-11-03 This is the textbook for my lighting design course it has been written for students of a Master's course in Interior Design Objective of the book is to introduce the reader to the design of a lighting system in an interior by going through four major steps The first step describes the fundamentals of lighting science and provides the basic concepts that will be used throughout the book The second step applies the concepts of the first to the study of the different types of lamps used in interior lighting The third step uses the knowledge from the first two in order to analyse the different types of luminaires available on the market and the tasks they can illuminate The fourth step suggests a workflow that the designer can follow to design a lighting system

*My Lighting Handbook* Lorenzo Simoni, 2015-09-28 This book follows my lighting design course for students of a Master's in Interior Design at Scuola Politecnica di Design in Milan Italy and my lectures and courses to lighting professionals but I believe it can be useful to non technical readers as well The objective is to present the design of a lighting system in an interior In the second edition I tried to improve along the lines I feel a handbook like this needs to follow I want a practical description of lighting with a theoretical basis where the concept is followed as closely as possible by the application All this must be implemented using a language register as simple as possible the difficulty must be in the concepts and applications not in the reading For these reasons I added a part on the intelligent use of a lighting calculation programme The objective is not to replace the programme's manual but to show the reasoning behind the choices and how to use this tool effectively The book is split into five parts The first four are fundamentals of lighting science and basic concepts applications to lamps types of luminaires and their tasks work flow to create the lighting system The fifth part new to the second edition explains how to calculate a few lighting systems with a free lighting software DIALux in order to give a hands deep awareness of how each choice affects the end result In this second edition I reorganised the chapters into more coherent educational units and rewrote some of the definitions and explanations I also added a few questions at the end of each chapter on which the reader can test his or her understanding of the material The result is a book that is more than a third longer than the previous edition with a third more pictures and more practical applications Hopefully the reader will find it a third more interesting as well
