

The Different Types of **MANUAL TRANSMISSIONS**

TYPE #1: NONSYNCHRONOUS MANUAL TRANSMISSION

Nonsynchronous manual transmissions are the first kind that everyone should know about. Synchronizers are a relatively newer transmission improvement, so you will likely find nonsynchronous systems in cars and semitrucks manufactured before the 1960s. If you're repairing or restoring classic cars from before this era, you will likely encounter a nonsynchronous system.

TYPE #2: SYNCHRONIZED MANUAL TRANSMISSION

Synchronized manual transmissions, also known as constant-mesh transmissions, have a synchronizer that manages the speed differential between the input and output shafts. This tool allows the collar and gear to align their speeds before gear tooth engagement. By equalizing the incoming and outgoing rotational speeds, the synchronizer reduces the risk of gear mismatching and slippage. The occurrence of either of these errors could result in gear tooth damage and eventual transmission repair.

TYPE #3: SEQUENTIAL MANUAL TRANSMISSION

Sequential manual transmissions are a kind of nonsynchronous manual transmission. You'll most likely encounter these transmission systems in motorcycle and racing cars as default transmissions and in other vehicles as upgrades. For those who work on hot rod reconstructions, you could find yourself facing one of these systems if you have a racing-class car.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles

National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee to Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles, 2010-08-30 Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks The book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption Currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the U S The miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently Instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile This is called load specific fuel consumption LSFC The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types For example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame
