1. **Explain** why the **United States** is a **democracy** and **not** a **dictatorship**.  
The United States is a democracy because it has a system of government where the people elect their representatives to make laws and decisions. This is in contrast to a dictatorship where a single person or a small group of people holds all the power.
2. **Describe** the **structure** of the **United States** government.  
The United States government is structured into three main branches: the executive branch, the legislative branch, and the judicial branch. Each branch has its own responsibilities and powers, and they all work together to govern the country.
3. **Identify** the **rights** and **responsibilities** of **citizens** in a **democracy**.  
In a democracy, citizens have certain rights, such as the right to vote, the right to free speech, and the right to a fair trial. They also have responsibilities, such as paying taxes, obeying the law, and participating in the political process.
4. **Compare** the **United States** to other **democracies** in the world.  
The United States is one of many democracies in the world. While all democracies share the principle of elected representatives, they differ in their specific structures and processes. For example, some countries have a single-party system, while others have a multi-party system.
5. **Discuss** the **importance** of **education** in a **democracy**.  
Education is crucial in a democracy because it helps citizens understand their rights and responsibilities, and it enables them to make informed decisions. A well-educated citizenry is essential for the health and stability of a democratic society.

**Abstract:** The purpose of this study was to determine the effect of a 12-week resistance training program on the muscle strength and endurance of young adults. The subjects were 15 male and 15 female college students. The subjects were divided into two groups: a control group and an experimental group. The experimental group performed a 12-week resistance training program, while the control group did not. The subjects were tested at the beginning and end of the 12-week period. The results showed that the experimental group had significantly greater muscle strength and endurance than the control group at the end of the 12-week period. The results also showed that the experimental group had significantly greater muscle strength and endurance than the control group at the beginning of the 12-week period. The results of this study suggest that a 12-week resistance training program can improve muscle strength and endurance in young adults.
