## **Teaching and Learning**

**Mathematics** Linda Jensen Sheffield, Douglas E. Cruikshank, 2004-03-29 Help students make sense of mathematics Rather than merely discussing how to improve students' ability to do mathematics this fifth edition focuses on helping them make sense of mathematics Based on research on the functioning of the mind as it engages in learning the text supports teachers as they promote mathematical understanding strengthen students' abilities to think and help students to attain computational fluency Features A rich collection of ready to use learning activities Fully integrated language and intent of Principles and Standards for School Mathematics PSSM A greater emphasis on problem solving and higher level thinking A greater focus on teaching mathematics to diverse learners Descriptions of a variety of promising and effective mathematics programs for the K-8 levels

**Preschool in the Suzuki Spirit** Susan Grilli, 1987 **Talking, Drawing, Writing** Martha Horn, Mary Giacobbe, 2023-10-10 In the early grades talking and drawing can provide children with a natural pathway to writing yet these components are often overlooked In Talking Drawing Writing Lessons for Our Youngest Writers authors Martha Horn and Mary Ellen Giacobbe invite readers to join them in classrooms where they listen, watch and talk with children then use what they learn to create lessons designed to meet children where they are and lead them into the world of writing The authors make a case for a broader definition of writing advocating for formal storytelling sessions in which children tell about what they know and for focused sketching sessions so that budding writers learn how to observe more carefully The book's lessons are organized by topic and include oral storytelling, drawing, writing, words assessment, introducing booklets and moving writers forward Based on the authors' work in urban kindergarten and first grade classes the essence and structure of many of the lessons lend themselves to adaptation through fifth grade The lessons follow a consistent format What's going on in the classroom What do children need to learn next Materials needed to teach the lesson Language used in each lesson Reasons behind why certain books are chosen and suggestions for additional children's books The authors show the thinking behind their teaching decisions and provide a way to look at and assess children's writing giving us much more than a book of lessons they present a vision of what beginning writing can look and sound like Perhaps most powerfully they give us examples of the language they use with children that reveal a genuine respect for and trust in children as learners

**Understanding the Math You Teach** Anita C. Burris, 2005 Teaching strategies are grounded in the NCTM standards and illustrated with real student work In addition the author provides a full range of concrete developmental activities that encourage future teachers to make math make sense for themselves as well as for their students Believing that teachers who

are comfortable with mathematics develop learners who are comfortable with mathematics this author empowers preservice preK 4 teachers to teach math confidently by laying a solid foundation of math concepts and building on that foundation with engaging meaningful standards based teaching methods Integrated in this unique combined approach to teaching mathematics is a thorough discussion of math manipulatives as well as the use of technology computer and otherwiseto assist today s mathematics teacher For educators aids and parents responsible for teaching Pre K to fourth grade math

**Arithmetic Counts!** Paul Shoecraft,2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget     *Resources in Education* ,1982     *Encyclopedia of Educational Reform and Dissent* Thomas C.
