1. A practical music examination can be taken once or twice. Those candidates who fail it on the first occasion take it a second time.

For those having their first attempt, 25% pass with distinction and 45% gain an ordinary pass. For those taking the examination for a second time, the corresponding figures are 5% and 70% respectively. The tree diagram below illustrates the situation.

(i) Find the probability that a randomly chosen candidate

- (A) fails the examination
- (B) passes the examination (with or without distinction) [4]

(ii) Given that a randomly chosen candidate passes the examination, find the probability that he or she passes with distinction. [3]

(iii) Jill and Jo are two randomly chosen entrants for the examination. Find the probabilities that

- (A) both pass (with or without distinction), but just one of them needs a second attempt.
- (B) Jill gets a better result than Jo. [8]

2. Midchester Rovers and Southpool United are two teams in a football league. Previous experience shows that, when these two teams play each other, the numbers of goals scored are independent and have the following probabilities.

Textual Information Access Eric Gaussier, Francois Yvon, 2013-02-04 This book presents statistical models that have recently been developed within several research communities to access information contained in text collections. The problems considered are linked to applications aiming at facilitating information access, information extraction and retrieval, text classification and clustering, opinion mining, comprehension aids, automatic summarization, machine translation, visualization. In order to give the reader as complete a description as possible, the focus is placed on the probability models used in the applications concerned by highlighting the relationship between models and applications and by illustrating the behavior of each model on real collections. Textual Information Access is organized around four themes: informational retrieval and ranking models, classification and clustering, regression, logistics, kernel methods, Markov fields, etc., multilingualism and machine translation, and emerging applications such as information exploration.

New Developments in the Biology of Chrysomelidae Pierre Jolivet, Jorge Santiago-Blay, Michael Schmitt, 2021-10-25 This book summarizes what is actually known about the biology of Leaf Beetles. It is the most recent study in the field. As we are well aware, Chrysomelidae, one of the three largest families of beetles, are of great economic importance since they can be a serious pest to crops or, on the other hand, can be used to destroy imported weeds. This is due to the selectivity of their feeding preferences. In this way, Chrysomelidae are an invaluable tool for studying plant selection mechanisms. The many and varied topics dealt with in this book cover almost all aspects of phylogeny, classification, paleontology, parasitology, biogeography, defenses, population biology, genetics, and biological control, as well as many other subjects. The most renowned specialists in these fields have been chosen to put together a diverse state of the art publication. Few beetle families have been studied in such detail as the Chrysomelids. This is not only due to their economic importance but also to their incredible variety of forms and behaviors. There are no less than 40,000 species currently in existence worldwide, but probably 100,000 species have existed since the Jurassic when they first came into being, with the Cycadoids and other primitive plant families later to diversify during the Cretaceous with the advent of flowering plants.
