environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this books shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism Environmental Law Kubasek,1994-01-01

Environmental Law Nancy Kubasek,Gary Silverman,2000 Geared to undergraduate or graduate courses in Environmental Law Also works well as a supplemental text in an Environmental Policy course This fundamental introduction to environmental law explains the legal system and process in general discusses specific environmental laws and presents the scientific background necessary for understanding each law The text is designed to introduce those without any legal or special scientific training to the system through which the nation attempts to preserve and protect the different aspects of our environment **Making Climate Lawyers** Kimberly K. Smith,2024-04-11 Why did it take so long for American law schools to start teaching about climate change Although most environmental law professors were aware of climate change by 1990 it took nearly fifteen years for them to incorporate the topic into their curriculum In her innovative new work Kimberly K Smith explores how American environmental law professors have addressed climate change identifying the barriers they faced how they overcame them and how they created climate law as a domain of legal specialization Making Climate Lawyers explores the history of why American law schools were resistant to teaching about climate change and how that changed over the course of a forty year period resulting in law schools across the country incorporating climate change into their curricula with many even establishing centers on the environment Smith challenges dominant explanations of why the United States was slow to develop climate policy it wasn't just political opposition or short sightedness Creating climate legal professionals required changing the fundamentals of legal education Based on dozens of interviews with faculty and students Making Climate Lawyers fills a gap in the literature on the intellectual history of climate change most of which focuses on the

history of climate science Smith focuses instead on how the climate problem fits or doesn't fit into the structure of American law She uses this story as a lens through which to understand both the transformation of legal education since the 1980s and the nature of climate change as a policy problem
