

LOAD EQUALIZER INSTALLATION GUIDE

⚠ CAUTION

BURN HAZARD. HOT SURFACE. DO NOT TOUCH.

WARNING: The SYLVANIA Load Equalizer gets **EXTREMELY HOT** during operation and remains hot for some time after operation. Securely attach to a flat metal vehicle surface, away from areas hot or heat sensitive objects. Never touch a hot Equalizer as severe burns may result. The SYLVANIA Load Equalizer will trigger the bulb-out detection warning.

A 1.0.58 source will require the Load Equalizer to dissipate up to 30W. A turn signal lamp will blink OFF & OFF, averaging half on 1 half off power. This will cause the Load Equalizer to heat to about 65°C (149°F) above the ambient temperature. Load Equalizer's use in the brake circuit can rise to 115°C (239°F) above the ambient temperature.

*The referenced temperature rise measurements were made under controlled conditions at 25°C ambient temperature and the Load Equalizer was mounted to a standard heat sink.

The Load Equalizer must be securely mounted to a flat metal surface to help dissipate heat. The Load Equalizer will get VERY hot during operation and for some time after. Secured to a component is required as heat sensitive objects may contact it. The Load Equalizer mounting tabs have clearance for a 4-40 or M3 machine screw. Use machine screws to securely attach the Load Equalizer to a flat metal surface. The wires can be extended if necessary to allow for precise mounting. Be sure to use an automotive grade wire of at least 18 AWG. Ensure all electrical connections are proper and well insulated. A SYLVANIA LED Load Equalizer must be wired in parallel with each LED vehicle lamp used for turn signal applications. Installation Replacement Connections are provided to connect the Load Equalizer wires to the Turn signal lamp control wires.

1 Insert Load Equalizer wires and fold the wire clip right up to the "stop" end of the clip.

2 Insert the connector wire (point the right connector) next to the other wire.

3 Fold the wire clip over the "stop" Bar wires. Smoothing clip is closed properly.

4 Fold back the end of the wire clip. The clip will hold the connector wire and guide through the wire clip and through the two wires, connecting the current from the two. Ensure the clip is seated right with wires. The wires should not be able to move around in the wire clip.

5 This process will be repeated to connect the Load Equalizer to the ground control wire.

*Turned, 1 - Wire not requiring load equalizer, such as parking/braking light

*Turned, 2 - Wire requiring load equalizer, such as brake light or turn signal
