Exercising Character A Workout Guide:

The Method Acting Exercises Handbook Lola Cohen, 2016-12-08 *The Method Acting Exercises Handbook* is a concise and practical guide to the acting exercises originally devised by Lee Strasberg one of the Method's foremost practitioners. The Method trains the imagination, concentration, senses, and emotions to recreate, not imitate, logical, believable, and truthful behavior on stage and in film. Building on nearly 30 years of teaching internationally and at the Lee Strasberg Theatre and Film Institute in New York and Los Angeles, Lola Cohen details a series of specific exercises in order to provide clear instruction and guidance to this preeminent form of actor training. By integrating Strasberg's voice with her own tried and tested style of teaching, Cohen demonstrates what can be gained from the exercises, how they can inform and inspire your learning, and how they might be applied to your acting and directing practice. As a companion to *The Lee Strasberg Notes* (Routledge, 2010), a transcription of Strasberg's own teaching, *The Method Acting Exercises Handbook* offers an unparalleled and updated guide to this world-renowned technique.

An Introduction to Intermediate and Advanced Statistical Analyses for Sport and Exercise Scientists Nikos Ntoumanis, Nicholas D. Myers, 2015-12-17 Ntoumanis and Myers have done sport and exercise science researchers and students a tremendous service in producing *An Introduction to Intermediate and Advanced Statistical Analyses for Sport and Exercise Scientists* This book has an outstanding compilation of comprehensible chapters dealing with the important concepts and technical minutia of the statistical analyses that sport and exercise science scholars use or should be using in their efforts to conduct meaningful research in the field It is a resource that all sport and exercise scientists and their students should have on their book shelves Robert Eklund School of Sport University of Stirling UK

Motivating to have a statistics text devoted to enabling researchers studying sport and exercise science to apply the most sophisticated analytical techniques to their data Authors hit the mark between using technical language as necessary and user friendly terms or translations to keep users encouraged Text covers traditional and well used tools but also less common and more complex tools but always with familiar examples to make their explanations come alive As a dynamic systems theorist and developmentalist I would love to see more researchers in my area create study designs that would enable the use of tools outlined here such as multilevel structural equation modeling MSEM or mediation moderation analyses to uncover cascades of relations among subsystems contributing to motor performance over time This text can facilitate that outcome Beverly D Ulrich School of Kinesiology University of Michigan USA

The domain of quantitative methods is constantly evolving and expanding This means that there is tremendous pressure on researchers to stay current both in terms of best practices and improvements in more traditional methods as well as increasingly complex new methods With this volume Ntoumanis and Myers present a nice cross section of both helping sport and exercise science researchers to

address old questions in better ways and even more excitingly to address new questions entirely I have no doubt that this volume will quickly become a lovingly dog eared companion for students and researchers helping them to continue to move the field forward Gregory R Hancock University of Maryland and Center for Integrated Latent Variable Research CILVR USA
