In our moment of crisis and rage this question is everywhere. Scholars ask from where its desires emerged, pundits divine its political future and the public asks how we lapsed into social chaos. For their part white evangelicals feel misunderstood while failing to see the direction of their ambitions. We must interrogate its aims not only through its past or current trends but also through the various fantasies by which it rejects and enlivens reality. *Against* traces five zones of opposition: future knowledge, sexuality, reality and society. If climate change is the greatest threat civilization has ever faced then a faith aiding collapse must face analysis. If it swims in assured forgiveness it feels no shame for its sins against humanity. If it wants a king it threatens democracy. If it veils xenophobia it shall be ever more cruel. In a critical and accessible history of odd ideas DeLay chronicles the past and sketches its troubling future. It might die but what's certain is that a faith built on nostalgia and supremacy won't moderate. We live in dangerous times so let us consider its justifications: turmoil, appetite and catastrophe. **Reproductive Techniques—Advances in Research and Application: 2013 Edition**, 2013-06-21 Reproductive Techniques Advances in Research and Application 2013 Edition is a ScholarlyBrief that delivers timely, authoritative, comprehensive and specialized information about Assisted Reproductive Techniques in a concise format. tissue development regeneration and renewal has been well known by embryologists and developmental biologists for many years Those presently active in research in the stem cell field owe much to previous work by embryologists and cancer researchers for their insights into what stem cells can do In the last 4 5 years the rapid expansion of the concept of adult tissue stem cells as pluripotent progenitors for various tissues has led to an even greater appreciation of the power of stem cells The demonstration that both embryonic and adult tissue stem cells have the ability to produce progenitor cells for tissue renewal has opened vast possibilities for treatment of congenital deficiency diseases as well as for regeneration of damaged tissues Older concepts of determination leading to loss of potential during differentiation of adult tissues are being replaced by newer ideas that cells with multiple potential exist in different forms in various adult organs and that cells thought to be restricted to differentiation to one cell type may be able to transdifferentiate into other tissue cell types Thus the concept of embryonic rests in adult tissues hypothesized to be the cellular origin of cancer by Durante and Conheim in the 1870s now can be expanded to include survival of pluripotential embryonic like stem cells in adult tissues **Oxford Textbook of**
