

Background: Bird Strikes in Aviation

- Occur when a bird collides with an aircraft; usually cause little damage, but can be devastating (ex. American Airlines Flight 1549 Hudson River incident).
- Roughly 10,000 strikes are reported annually; estimates suggest that as few as half of total strikes are reported.
- Less than 8% of strikes occur above 3,000 feet and 61% occur at less than 100 feet (according to FAA Wildlife Hazard Management Manual).
- FAA estimates \$400 million in damages annually are attributed to bird strikes in the United States alone, and over \$1.2 billion in damages occur annually worldwide.

Faa Report On Bird Strikes:

Wildlife Strikes to Civil Aircraft in the United States 1990-2003 Edward C. Cleary, 2004 This report presents a summary analysis of data from the FAA's National Wildlife Strike Database for the 14 year period 1990 through 2003. Unless noted all totals are for the 14 year period and percentages are of the total known. Because of the large amount of data Tables 2 through 17 present 14 year totals only and do not display data for individual years. In addition to the summary analysis for 1990 through 2003 a sample of significant wildlife strikes to civil aircraft in the USA during 2003 is presented at the end of the report. These strike examples demonstrate the widespread and diverse nature of the problem. Bird Strike in Aviation Ahmed F. El-Sayed, 2019-07-22 Groundbreaking Handbook Offers Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard. Though annual damages from bird and bat collisions with aircraft have been estimated at 400 million in the United States and up to 1.2 billion in commercial aviation worldwide and despite numerous conferences and councils dedicated to the issue very little has been published on this expensive and sometimes lethal flying risk. Bird Strike in Aviation seeks to fill this gap providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough and comprehensive examination of the subject Dr El Sayed offers different approaches to reducing bird strikes including detailed coverage of the three categories necessary for such reduction namely awareness education bird management active and passive control and aircraft design. In addition the text discusses the importance of cooperation between airplanes airports and air traffic authorities as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include Statistics and analyses for bird strikes with both civil and military helicopters as well as military fixed wing aircrafts including annual costs critical flight altitudes critical parts of aircraft distance from air base and specifics of date and timing. Thorough review and analysis all fatal bird strike accidents and most non fatal accidents since 1905 the first book to provide such a reference. The use of numerical methods in analyzing historic data ex probability functions finite element methods for analyzing impact on aircraft structure experimental measurement technique for displacement vibration component distortion etc. Instruction on identification of bird species using visual microscopic and DNA evidence and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision. With its wealth of statistical data innovative research and practical suggestions Bird Strike in Aviation will prove a vital resource for researchers engineers and graduate students in aerospace engineering manufacturing or ornithology as well as for military and civilian pilots and flight crew or professionals in aviation authorities and air traffic control. **US Airways Flight 1549 Accident** United States. Congress. House. Committee on Transportation and Infrastructure. Subcommittee on Aviation, 2009 A hearing about the collision of an airliner with a flock of birds which forced the pilot Chesley Sullenberger to land the crippled aircraft on the Hudson River which he did successfully.
