Transportation VDOT has made significant investments in the traffic monitoring infrastructure that supports intelligent
transportation systems ITS The purpose of this infrastructure is to provide accurate real time information on the status of the
transportation system thus it is critical that the monitoring infrastructure provide accurate data Although detectors are
usually tested immediately after installation it is well known that they operate in a very harsh environment and thus are
susceptible to degradation in accuracy and or complete failure Consequently a long term commitment to data quality
assurance is required through maintenance data quality assessment testing and repair replacement The quality of data from
ITS applications is becoming increasingly important as the data are more widely used Not only is the data used in real time
operations but also in myriad other often more traditional transportation applications The purpose of this research project
was to develop a procedure that VDOT could use to assess its ITS data quality The report includes a data quality assessment
procedure that is based on theory practice and empirical investigation The procedure has the following key features
benchmark data collection using temporary installation of non intrusive detectors data quality assessed at the lane level to
pinpoint problem detectors data quality assessed at the 1 minute interval or minimum practical measurement interval level to
provide sufficient quantities of data in reasonable periods of time analysis techniques including both measures and plots
which provide quantitative and visual indications of data quality The authors recommend that VDOT begin to use the
procedure on both an ad hoc basis and in a statewide program as a means of protecting its significant investment in ITS data
