Radiation Belt Dynamics: Theory, Observation and Modeling Qianli Ma,Xinliang Gao,Dedong Wang,2024-12-12 The radiation belts of the Earth and other magnetized planets are populated by relativistic particles which are highly dynamic due to various source and loss processes Although the Earth's intrinsic magnetic fields trap charged particles the satellite observations revealed that the outer radiation belt fluxes are strongly affected by solar wind and geomagnetic activities The direct drivers of the radiation belt variability are radial diffusion due to ultra low frequency waves and local wave particle interactions due to whistler mode waves electron cyclotron waves and ion cyclotron waves Quasilinear and nonlinear theories were developed to demonstrate and quantify the importance of each process in the radiation belt dynamics Numerical simulations generally reproduce the overall source and loss of radiation belt particles but detailed quantification of the observed features is challenging Machine learning technique is proved as a useful tool in reproducing and forecasting the particle fluxes in radiation belts

Effects of Game and Game-like Training on Neurocognitive Plasticity Guido P. H. Band,Chandramallika Basak,Heleen A. Slagter,Michelle W. Voss,2016-05-17 Cognitive training is not always effective This is also the case for the form of cognitive training that this Research Topic focuses on prolonged performance on game like cognitive tasks The ultimate goal of this cognitive training is to improve ecologically valid target functions For example cognitive training should help children with ADHD to stay focused at school or help older adults to manage the complexity of daily life However so far this goal has proven too ambitious Transfer from trained to non trained tasks is not even guaranteed in a laboratory so there is a strong need for understanding how when and for how long cognitive training has effect Which cognitive functions are

amenable to game training for whom and how Are there mediating factors for success such as motivation attention or age Are the improvements real or can they be attributed to nonspecific factors such as outcome expectancy or demand characteristics Are there better strategies to improve cognitive functions through game training This Research Topic of Frontiers in Human Neuroscience charts current insights in the determinants of success of game training **Cambridge**

Exploring Bacterial Colonies in Solid Foods or Model Foods Using Non-Destructive Techniques Sophie Jeanson,Sylvie Lortal,Anne Thierry,2016-02-18 Bacteria are always present in foods either as initial contamination or as technological agents In solid foods they are immobilized and develop as colonies So far there is a lack of knowledge about the bacteria in colonies growth and physiology Non destructive and resolute techniques such as fluorescent microscopy now allow investigating the world of bacteria in colonies and their surroundings in food at the microscopic scale **Perceiving and**

Acting in the Real World: From Neural Activity to Behavior Simona Monaco,Gavin Buckingham,Irene Sperandio,J.Douglas Crawford,2016-12-07 One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the

functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies Auto-Carto 9 American Society for Photogrammetry and Remote Sensing,1989 **Radio Broadcast** ,1926 ANS Proceedings ,1985 Annual Report India.
