Debenham, 1989 This is a book about the design of knowledge based systems of prime interest to those organizations with a commitment to building up large integrated corporate knowledge bases It is principally written for those who have an interest in building expert systems and deductive database systems Debenham s method is to represent and analyze knowledge in a way that is independent of any particular expert system shell or computer language This method extends from initial knowledge acquisition to knowledge base implementation and knowledge base maintenance The text is illustrated with examples expressed in logic programming a procedure adopted because it is both simple and widely understood comparative with other knowledge languages While this book is not intended to be a complete account of expert systems or deductive databases it will enable the knowledge processing specialist to do a better and more systematic job **Introduction to Quantitative Data Analysis in the Behavioral and Social Sciences** Michael J. Albers, 2017-02-21 Guides readers through the quantitative data analysis process including contextualizing data within a research situation connecting data to the appropriate statistical tests and drawing valid conclusions Introduction to Quantitative Data Analysis in the Behavioral and Social Sciences presents a clear and accessible introduction to the basics of quantitative data analysis and focuses on how to use statistical tests as a key tool for analyzing research data The book presents the entire data analysis process as a cyclical multiphase process and addresses the processes of exploratory analysis decision making for performing parametric or nonparametric analysis and

practical significance determination In addition the author details how data analysis is used to reveal the underlying patterns and relationships between the variables and connects those trends to the data's contextual situation Filling the gap in quantitative data analysis literature this book teaches the methods and thought processes behind data analysis rather than how to perform the study itself or how to perform individual statistical tests With a clear and conversational style readers are provided with a better understanding of the overall structure and methodology behind performing a data analysis as well as the needed techniques to make informed meaningful decisions during data analysis The book features numerous data analysis examples in order to emphasize the decision and thought processes that are best followed and self contained sections throughout separate the statistical data analysis from the detailed discussion of the concepts allowing readers to reference a specific section of the book for immediate solutions to problems and or applications Introduction to Quantitative Data Analysis in the Behavioral and Social Sciences also features coverage of the following The overall methodology and research mind set for how to approach quantitative data analysis and how to use statistics tests as part of research data analysis A comprehensive understanding of the data its connection to a research situation and the most appropriate statistical tests for the data Numerous data analysis problems and worked out examples to illustrate the decision and thought processes that reveal underlying patterns and trends Detailed examples of the main concepts to aid readers in gaining the needed skills to perform a full analysis of research problems A conversational tone to effectively introduce readers to the basics of how to perform data analysis as well as make meaningful decisions during data analysis Introduction to Quantitative Data Analysis in the Behavioral and Social Sciences is an ideal textbook for upper undergraduate and graduate level research method courses in the behavioral and social sciences statistics and engineering This book is also an appropriate reference for practitioners who require a review of quantitative research methods Michael J Albers Ph D is Professor in the Department of English at East Carolina University His research interests include information design with a focus on answering real world questions the presentation of complex information and human information interaction Dr Albers received his Ph D in Technical Communication and Rhetoric from Texas Tech University [Clustering Phenomena in Nuclei, II](#) D.
