Direct Current Motor Control Led by Microcontroller Created PWM Thinesh Kunasegeran,2012

Direct current DC motor has already become an important drive configuration for many applications across a wide range of powers and speeds The ease of control and excellent performance of the DC motors will ensure that it is widely used in many applications This project is mainly concerned on DC motor speed control system by using microcontroller PIC 16F877A Pulse Width Modulation PWM technique is used where its signal is generated in microcontroller The program for PWM generation is written in C Language using MPLAB IDE software It is programmed into the microcontroller using PIC Microcontroller Start up Kit Then the microcontroller is installed into the motor control circuit The Microcontroller acts as the motor speed controller in this project The PWM signal will send to motor driver to vary the voltage supply to motor to acquire desired speed Besides it also shows a graph of motor speed versus PWM dutycycle percentage to let the user monitor the performance of the system easily Based on the result the readings are quite reliable Through the project it can be concluded that microcontroller PIC 16F877A can control motor speed at desired speed efficiently by using Pulse Width Modulation signal

DC Motor Speed Controller Mohd Amir Fikri Awang,2010

The automatic control has played a vital role in the advance of engineering and science Nowadays in industries the control of direct current DC motor is a common practice thus the implementation of DC motor of controller speed is important The main purpose of motor speed control is to keep the rotation of the motor at the preset speed and to drive a system at the demanded speed When used in speed application speed feedback control the DC motor s speed or confirms that the motor is rotating at the desired speed To maintain the speed it requires the speed feedback at all times The speed of a DC motor usually is directly proportional to the supply voltage For instance if we reduce the supply voltage from 12 Volts to 6 Volts the motor will run at half or lower the speed The advantages used DC motor is provide excellent speed control for acceleration and deceleration with effective and simple torque control The fact that the power supply of a DC motor connects directly to the field of the motor allows for precise voltage control which is necessary

with speed and torque control applications The common methods are used to control speed DC motor is Proportional Integral Derivative PID and PC based to control it In this project the method use as controller is Programmable Interface Controller PIC microcontroller for the electric current control to drive a motor The expectation of this project is to get the precise the demanded speed and to drive a motor at that speed **Electronics & Wireless World** ,1984 **EDN** ,1995 Applied Science & Technology Index ,1996 *Thomas Register* ,2004 **Government Reports Announcements & Index** ,1996-03 **Electrical & Electronics Abstracts** ,1997
