

Basic heat load calculation for air-conditioning system

(3) How to calculate heat load

"Heat transfer load (2)"

Calculation example

Let's determine the heat transfer load of a cubic building surrounded by walls as shown in the drawing.

Coefficient of overall heat transfer : U-factor

$$U = \frac{1}{\frac{1}{23} + \frac{0.02}{1.5} + \frac{0.1}{1.4} + \frac{0.05}{0.042} + \frac{0.02}{1.5} + \frac{1}{9}}$$

$$= 0.69 \quad [W/m^2 \cdot K]$$

Wall surface area : A

$$A = (1 \times 1) \times 6 = 6 \quad [m^2]$$

Heat transfer load : q_t

$$q_t = 0.69 \times 6m^2 \times \{26^\circ\text{C} - (-4)^\circ\text{C}\} = 124 \quad [W]$$

Wall materials

Material	Thickness (mm)	λ (W/m·K)
①. Mortar	20	1.5
②. Concrete	100	1.4
③. Glass wool 24K	50	0.042
④. Mortar	20	1.5

The heat transfer load can be reduced with the use of a material having a low thermal conductivity or thicker member.

Heating and Air Conditioning Tips for Homeowners Lloyd Edwards,2009-04-11 The purpose of this book is to simplify the different heating and air conditioning systems and their components by providing elementary text on the relationships and operation of indoor comfort equipment The author has taken the utmost care to present this subject in thorough yet simple nontechnical language Everyone regardless of his or her technical aptitude will be able to diagnose and repair some problems with their Heating and Air conditioning system This book offers troubleshooting procedures maintenance tips and details which can help to extend the life of your heating and air conditioning system It includes all technical terms with illustrations and definitions of heating and cooling systems from oil furnaces to heat pumps

HVAC Cooling Load - Calculations and Principles A. Bhatia,2014-10-16 Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems which can maintain the required conditions in the conditioned space To estimate the required cooling or heating capacities one has to have information regarding the design indoor and outdoor conditions specifications of the building specifications of the conditioned space such as the occupancy activity level various appliances and equipment used etc and any special requirements of the particular application For comfort applications the required indoor conditions are fixed by the criterion of thermal comfort while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products

being stored. Generally heating and cooling load calculations involve a systematic and stepwise procedure which account for all the building energy flows. In practice a variety of methods ranging from simple rules of thumb to complex transfer function methods are used to arrive at the building loads. This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD CLF method suggested by ASHRAE and includes two detailed examples. For more advanced methods such as TFM the reader should refer to ASHRAE and other handbooks. Learning Objective: At the end of this course the student should be able to:

1. Understand the basic terminology and definitions related to air conditioning load calculations.
2. Explain the differences between heating and cooling load design considerations.
3. Explain the difference between 1 space heat gain v/s cooling load, 2 space cooling v/s cooling load and 3 external loads v/s internal loads.
4. Differentiate between sensible and latent loads.
5. List commonly used methods for estimating cooling loads.
6. Estimate the internal and external cooling loads using CLTD CLF method from building specifications design indoor and outdoor conditions occupancy etc.
7. Describe various equations and the information sources to determine conductive load through opaque building elements.
8. Describe various equations and information sources to determine the solar transmission load through glazing.
9. Describe various equations and information sources to determine the internal load due to people lights and power appliances.
10. Determine the supply air flow rate.
11. Learn by examples the detailed methodology to cooling load calculations.
12. Learn the functional parameters of software programs such as TRACE 700 and CHVAC.

Residential Load Calculation Hank Rutkowski, 1986 *Heating, Ventilating, and Air Conditioning* Faye C. McQuiston, Jerald D. Parker, Jeffrey D. Spitler, 2005 Based on the most recent standards from ASHRAE the Sixth Edition provides complete and up to date coverage of all aspects of heating ventilation and air conditioning. You'll find the latest load calculation procedures, indoor air quality procedures and issues related to ozone depletion. **HVAC Principles and Applications Manual** Thomas E.
