Lateral Preferences and Human Behavior Clare Porac,Stanley Coren,2012-12-06 Lateral preferences are strange puzzling and on the surface not particularly adaptive aspects of behavior

Why one chooses habitually to write or to brush the teeth with the right hand while a friend or family member habitually uses the left hand might be interesting enough to elicit some conversation over dinner or a drink but certainly does not seem to warrant serious scientific study Yet when one looks at human behaviors more carefully one becomes aware that asymmetrical behaviors favoring one side or the other are actually a fairly universal characteristic of human beings In the same way that we are right or left handed we are also right or left footed eyed and eared As a species we are quite lopsided in our behavioral coordinations furthermore the vast majority of us are right sided Considering that we are looking at a sizable number of behaviors and at a set of biases that seem to be systematic and show a predictable skew in the population the problem takes on greater significance The most obvious form of lateral preference is of course handedness When studying behavioral asymmetries this is the issue with which most investigators start Actually we entered this research area through a much different route Around 1971 we became interested in the problem of eye dominance or eye preference This is a behavior where the input to one eye seems to be preferred over that to the other in certain binocular viewing situations
