

Intensive Care Unit (ICU)

Some of the equipment used to support our patients

Central venous catheter

Thin catheter that goes into a large vein in the chest. It is used to give fluids, medicines and to take blood samples.

Breathing tubes

These tubes are inserted into the mouth and connected to a machine that breathes for the patient. The tubes are called:

Feeding pump

Feeding pump is used to deliver food and fluids to the patient through a tube in the nose to provide the nutrients needed for recovery.

External ventricular drain (EVD)

Regulates pressure around the brain to prevent swelling.

Intracranial pressure (ICP) monitoring

A tube is inserted through the skull to measure brain pressure.

High flow oxygen therapy

Delivers oxygen and heat to the patient to help breathing.

Blood gas machine

Used to measure the levels of oxygen, carbon dioxide and pH in the blood.

Infusion pumps

Delivers fluids and drugs into the vein, such as antibiotics, pain relief and sedatives.

Arterial line

Thin tube inserted into a small artery to monitor blood pressure and take blood samples.

Cough assist machine

Blows air into the lungs to help with the cough reflex.

Ventilator

Mechanical device that helps the patient breathe.

Suction machine

Used to remove secretions from the airway when patients have a breathing tube.

Nitric oxide delivery device

Delivers nitric oxide to the patient to help with breathing.

Bronchoscopy

Thin tube with a camera at the end to look inside the lungs and take samples.

Bedside monitor

Monitors vital signs and other data. The patient's heart rate, breathing and blood pressure.

PCA pump (patient controlled analgesia)

Delivers intravenous pain relief when patient presses a button.

Epidural

An injection in the back to deliver pain relief to the patient.

Patient record

A record of important information such as blood pressure, heart rate, respiratory rate, intracranial pressure, urine output.

Specialised ICU bed

Adjustable bed with a motor to help lift and lower the patient. It can also be used for positioning the patient.

Sequential compression device

Used to prevent blood clots in the legs.

Urinary catheter

Used to collect urine from the bladder.

Haemodialysis machine

A machine used to filter the blood of patients with kidney failure.

Patient cooling device

Used to cool the patient's body temperature.

External pacemaker

Temporary device to control the heart rate.

Ultrasound

High frequency sound waves to create an image of internal body parts. Used to guide procedures and check progress.

Extracorporeal membrane oxygenation

Provides temporary life support to the heart and lungs.

Sounds

Medical sounds from the equipment help staff to monitor their patients.

Intensive Care Medicine Joint Faculty of Intensive Care Medicine, 2003* **Quality Management in Intensive Care** Bertrand Guidet, Andreas Valentin, Hans Flaatten, 2016-02-15 This book is one of the first to comprehensively summarise the latest thinking and research in the rapidly evolving field of quality management in intensive care Quality indicators and outcome measures are discussed with a practical focus on patient centred evidence based

implementation for safer and more effective clinical practice Chapters on topics such as teambuilding patient satisfaction mortality and morbidity and electronic management systems are organised into three sections covering quality management at the scale of the individual patient the intensive care unit and the national and international level Written by a team of over forty international experts in the specialty with editors who have been heavily involved for many years with the European Society of Intensive Care Medicine the book reflects commonly accepted goals and guidelines for best practice and will be valuable for practitioners worldwide The ideal one stop resource for intensive care physicians as well as ICU and hospital managers Contemplating the Role of an Intensive Care Doctor Diane Dennis, Peter Vernon van Heerden, Michael

Ruppe, 2025-08-30 The intensive care unit ICU is a specialized hospital ward where people with life threatening conditions receive around the clock monitoring and life support It is here that the sickest of the sick patients are managed and there is a large spectrum of challenging working conditions that may cause significant psychological stress to those who function in them There is a growing body of evidence supporting the increasing prevalence of mental health issues among the medical fraternity The notion of professional burnout syndrome in the intensive care specialty is well described in the literature and is perceived to be due to the workload and acuity of the field Contemplating the Role of the Intensive Care Doctor brings together an experienced group of intensivists and other clinicians to provide further commentary related to the observations and generous reflections of those interviewed The main focus is on the need for young doctors to contemplate their own personality and the intensive care environment itself to prepare themselves to work within the specialty and have longevity and good health while doing so The book is comprised of eighteen chapters that explore personality traits various allocations of role the working environment and the complex nature of communication between peers teams and families It aims to facilitate the resilience of young doctors by challenging their perception of themselves and of those around them We hope that by exploring these narratives these doctors will be better prepared to manage their potential vulnerability within the ICU medical team Management of Intensive Care D. Reis Miranda, A. Williams, Ph. Loirat, 2012-12-06 Intensive Care

Medicine has been continuously growing and expanding culturally technically and geographically Monitoring and instrumentation are continuously improving and more and more hospitals are getting Intensive Care facilities The costs have proportionally increased over the years so that ICUs represent today a major cost for health structures Since the available resources are limited a real need is emerging to set the limits and indications of Intensive Care It is understood that the problem not only involves medical considerations but also ethical and economical aspects of the utmost importance For the first time in Europe this book edited by Reis Miranda and his colleagues tackles systematically the many structural aspects of the European Intensive Care The organisation and financing of health care in the Old Continent is deeply different from the American one and the results and consequent proposals obtained in the USA cannot simply be transferred to this side of the Atlantic Ocean We are extremely pleased to welcome this first European attempt to discuss the Intensive Care problem It lays

no claims to giving definite replies in a continuously developing field but it will surely become the basis for future discussions and proposals I am particularly happy that this work has mainly developed within the European Society of Intensive Care whose final target is to ensure a common standard of therapy in our old Europe beyond national differences We warmly congratulate the authors and I am sure that their work will find wide diffusion and consent

medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up to date clinical information. An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines a comprehensive multidisciplinary approach presenting the information is essential similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome an expanded discussion of the physiology and operation of mechanical ventilation obstetrical care in the ICU neurosurgical emergencies acute coronary syndromes cardiac arrhythmias role of whole body rehabilitation in the ICU ethical conduct of human research in the ICU and nursing care of the ICU patient.
