## Illustrating Equivalent Fractions Using Fraction Models

Equivalent fractions are fractions with different numbers representing the same part of a whole. They have different numerators and denominators, but their fractional values are the same.

GRADE 4

$$\frac{2}{4} = \frac{4}{8} = \frac{1}{2}$$

Diagram illustrating equivalent fractions. The first fraction  $\frac{2}{4}$  is multiplied by  $\frac{2}{2}$  (represented by a red box labeled "x 4" and a yellow box labeled "+2") to get  $\frac{4}{8}$ . The second fraction  $\frac{4}{8}$  is then multiplied by  $\frac{1}{2}$  (represented by a red box labeled "x 4" and a yellow box labeled "+2") to get  $\frac{1}{2}$ .

To get equivalent fractions, multiply both the numerator and denominator of a fraction by the same whole number.

Remember, whatever you do to the numerator (top number), you also do to the denominator (bottom number).

By learning in this way students discover the power of their own thinking and gain confidence that extends well beyond mathematics. This book introduces readers to urban elementary and K-8 schools where teachers have dramatically transformed math learning for teachers and for students. Readers will follow teachers as they transform instruction using schoolwide lesson study building powerful new ways for educators to learn from each other and practice innovative teaching techniques. The authors use in-depth classroom portraits from the outset of schoolwide lesson study and three years later to illuminate the changes in mathematics instruction at a school that raised its proficiency on Smarter Balanced Assessment from 15% to 56%. Extensive resources and links are provided to help readers understand and build on the work of these schools which is grounded in established principles of collective efficacy, intrinsic motivation, and learner agency for both students and teachers. Book Features: Shows how teaching through problem solving can erase the achievement gap in mathematics learning.
