A. Saleh,2025-06-02 This book introduces classical modal optics and discrete quantum systems using a common  
mathematical approach based on linear vector spaces It explores the three key elements of photonic quantum information the  
optical bimode the qubit and the photon Both the bimode and qubit are represented as vectors in a two dimensional linear  
vector space but the qubit distinguishes itself through unique properties linked to quantum measurement While optical  
bimodes can be mutually coupled qubits can be entangled enabling revolutionary quantum information technologies A single  
photon occupying a bimode encodes a qubit facilitating cryptographic protocols for secure communication When occupying  
two bimodes a photon encodes two qubits enabling local gates A photon distributed across spatial modes encodes an image  
Entangled photon pairs form two qubits enabling quantum state teleportation and quantum networks Additionally two  
photons with spatiotemporal modal entanglement form a biphoton useful for quantum sensing and imaging with sensitivity  
surpassing classical limits With numerous illustrations examples and exercises the book is ideal for classroom teaching or  
self study at the upper level undergraduate or beginning graduate level It also serves as an accessible introduction for  
readers interested in the foundational principles driving the second quantum revolution and its diverse applications in
