in 2011 **Value Management** Mr Adam J Davies, Mr Roger H Davies, 2012-09-28 Change programmes in both private and
public sectors have a poor record of delivering their intended value The reasons given most often for their failure include
lack of executive support or buy in from key users loose requirements definition weak programme management and plain
wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies
in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs
Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a
change programme deliver when and in what order so as to cause intended value against a defined purpose with speed and
certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the
programme remains on purpose and on value and two answers to be given Target time and align change programmes to
deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond
implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show
how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic
