Global Handbook on Noncommunicable Diseases and Health Promotion is an important resource for understanding and approaching chronic illnesses and their prevention. This timely text balances theory and strategies to provide an integrative context for health affecting behaviors regarding tobacco use, food choices, and physical activity. Coverage expands on current medical, clinical, public health perspectives, arguing that closer attention to social context is crucial to better use of health resources and more relevant preventive efforts. Possible roles for hospitals, the workplace, government agencies, NGOs, and other institutions are analyzed, as is the potential for addressing larger underlying health factors, e.g., inequities and poverty at the societal level. Topics covered include: The nature of causality beyond traditional evidence; Learning from the social sciences in chronic disease health promotion; Contextual factors in health and illness; Understanding and applying a social determinants of health framework for addressing NCDs; Public health NCDs; health promotion and business partnering; NCDs and civil society; a history and a roadmap. As the authors of the Global Handbook on Noncommunicable Diseases and Health Promotion make abundantly clear, opportunities are as numerous as the issues and researchers and graduate students in global public health, health promotion, and chronic disease epidemiology will find these chapters positive and realistic.

International Handbook of Research on Multicultural Science Education Mary M. Atwater, 2022-06-30. This handbook gathers in one volume the major research and scholarship related to multicultural science education that has developed since the field was named and established by Atwater in 1993. Culture is defined in this handbook as an integrated pattern of shared values, beliefs, languages, worldviews, behaviors, artifacts, knowledge, and social and political relationships of a group of people in a particular place or time that the people use to understand or make meaning of their world, each other, and other groups of people and to transmit these to succeeding generations. The research studies include both different kinds of qualitative and quantitative studies. The chapters in this volume reflect differing ideas about culture and its impact on science learning and teaching in different K-14 contexts and policy issues. Research findings about groups that are underrepresented in STEM in the United States and in other countries related to language issues and indigenous knowledge are included in this volume.
