## **Example Of Acknowledgement In Automotive:**

**Model-Driven Development of Reliable Automotive Services** Manfred Broy, Ingolf Krüger, Michael Meisinger, 2008-07-17 Software development for the automotive domain has become the enabling technology for almost all safety critical and comfort functions so as to the customer. Ninety percent of all innovations in automotive systems are directly or indirectly enabled by embedded software. The numbers of serious accidents have declined in recent years despite constantly increasing traffic; this is correlated with the introduction of advanced software-enabled functionality for driver assistance such as electronic stability control. Software contributes significantly to the automotive value chain. By 2010 it is estimated that software will make up 40% of the value creation of automotive electronics. However, with the large number of software-enabled functions, their interactions and the corresponding networking and operating infrastructure come significant complexities both during the automotive systems engineering process and at runtime. A central challenge for automotive systems development is the scattering of functionality across multiple subsystems such as electronic control units (ECUs) and the associated networks. As an example, consider the central locking systems (CLS) whose functionality is spread out over up to 19 different ECUs in some luxury cars. Of course, this includes advanced functionality such as seat positioning and radio tuning according to driver presets upon entry as well as unlocking in case of a detected impact or accident. However, this example demonstrates that modern automotive systems bridge comfort and safety-critical functionality. This induces particular demands on safety and security and in general software and systems quality. The resulting challenges and opportunities were discussed in depth at the second Automotive Software Workshop San Diego (ASWSD 2006) on whose results we report here.

**Car Cultures** Daniel Miller, 2020-05-26 Anyone who assumes that a car is simply a means to get from point A to point B or who even thinks that they know what a car is should read this book. Profoundly shaped by culture, the car gives rise to a wide range of emotions from guilt about the environment in the UK to aboriginal concerns with car corpses to struggles to keep the creatures alive with everything but the proper spare parts in West Africa. Cars and their landscapes prove central to human life from its most intimate to the widest sense of global crisis and are capable of inspiring epic passions. From road rage in Western Europe to the struggles of cab driving in Africa to the emergence of Black identity in the US, this book examines the essential humanity of the car, which includes the jealousies, gender differences, fears, and moralities that cars give rise to. Firmly grounded in detailed ethnographic and historical scholarship, this is the first book to provide an informed sense of cars as one of the most familiar and significant forms of material culture.

**Intelligent Autonomous Vehicles 1995** K. Koskinen, Aarne Halme, 2014-05-23 The area of intelligent autonomous vehicles or robots has proved to be very active and extensive both in challenging applications as well as in the source of theoretical development. Automation technology is rapidly developing in many areas including agriculture, mining, traditional manufacturing, automotive industry, and space exploration. The 2nd IFAC Conference on Intelligent Autonomous Vehicles

1995 provides the forum to exchange ideas and results among the leading researchers and practitioners in the field This publication brings together the papers presented at the latest in the series and provides a key evaluation of developments in automation technologies
