Research Methods in Physical Activity and Health Stephen R. Bird, 2018-12-07 Physical activity is vital for good health. It has an established strong evidence base for its positive effects on functional capacity, reducing the risk of many chronic diseases, and promoting physical, mental, and social well-being. Furthermore, these benefits are evident across a diversity of ages, groups, and populations. The need for these benefits in current societies means that exercise practitioners, professional bodies, institutions, health authorities, and governments require high quality evidence to establish appropriate exercise guidelines, implementation strategies, and effective exercise prescription at individual, group, and population levels. Research Methods in Physical Activity and Health is the first book to comprehensively present the issues associated with physical activity and health research and outline methods available along with considerations of the issues associated with these methods and working with particular groups. The book outlines the historical and scientific context of physical activity and health research before working through the full research process from generating literature reviews and devising a research proposal through selecting a research methodology and quantifying physical activity and outcome measures to disseminating findings. Including a full section on conducting research studies with special populations, the book includes chapters on Observational and cross sectional studies, Interviews, questionnaires, and focus groups. Qualitative and quantitative research methods, Epidemiological research methods, Physical activity interventions and sedentary behaviour, and Working with children, older people, indigenous groups, LGBTI groups, and those with physical and mental health issues. Research Methods in Physical Activity and Health is the only book to approach the full range of physical activity research methods from a health perspective. It is essential reading for any undergraduate student conducting a research project or taking applied research modules in physical activity and health, graduate students of epidemiology, public health, exercise psychology, or exercise physiology, with a physical activity and health focus, or practicing researchers in the area.
