The Nursing Informatics Implementation Guide Eleanor Callahan Hunt, Sara Breckenridge Sproat, Rebecca Rutherford Kitzmiller, 2013-03-09 Health institutions are investing in and fielding information technology

solutions at an unprecedented pace. With the recommendations from the Institute of Medicine around information technology solutions for patient safety mandates from industry groups such as Leapfrog about using information systems to improve health care and the move toward evidence based practice health institutions cannot afford to retain manual practices. The installation of multi million dollar computerized health systems represents the very life blood of contemporary clinical operations and a crucial link to the financial viability of institutions. Yet the implementation of health information systems is exceptionally complex, expensive and often just plain messy. The need for improvement in the art and science of systems implementation is clear up to 70-80% of information technology installations fail. The reasons are multi faceted ranging from the complexity of the diverse workflows being computerized, the intricate nature of health organizations, the knowledge and skills of users to other reasons such as strategies for obtaining key executive support weaving through the politics peculiar to the institution and technical facets including the usability of systems. Thus the art and science of successfully implementing systems remains deeply layered in elusiveness. Still given the pervasiveness of system implementations and the importance of the outcomes this is a critical topic especially for nurses and informatics nurse specialists.

How HL7's New API is Transforming Healthcare Mark L. Braunstein, 2018-07-26 This textbook begins with an introduction to the US healthcare delivery system, its many systemic challenges and the prior efforts to develop and deploy informatics tools to help overcome those problems. It goes on to discuss health informatics from an historical perspective, its current state and its likely future state now that electronic health record systems are widely deployed. The HL7 Fast Healthcare Interoperability standard is being rapidly accepted as the means to access the data stored in those systems and analytics is increasing being used to gain new knowledge from that aggregated clinical data. It then turns to some of the important and evolving areas of informatics including population and public health, mHealth and big data and analytics. Use cases and case studies are used in all of these discussions to help readers connect the technologies to real world challenges. Effective use of informatics systems and tools by providers and their patients is key to improving the quality, safety and cost of healthcare. With health records now digital no effective means has existed for sharing them with patients among the multiple providers who may care for them and for important secondary uses such as public population health and research. This problem is a topic of congressional discussion and is addressed by the 21st Century Cures Act of 2016 that mandates that electronic health record (EHR) systems offer a patient facing API. HL7's Fast Healthcare Interoperability Resources (FHIR) is that API and this is the first comprehensive treatment of the technology and the many ways it is already being used. FHIR is based on web technologies and is thus a far more facile, easy to implement approach that is rapidly gaining acceptance. It is also the basis for a universal health app platform that literally has the potential to foster innovation around the data in patient records similar to the app ecosystems smartphones created around the data they store. FHIR app stores have already

been opened by Epic and Cerner the two largest enterprise EHR vendors Provider facing apps are already being explored to improve EHR usability and support personalized medicine Medicare and the Veteran s Administration have announced FHIR app platforms for their patients Apple s new IOS 11 3 features the ability for consumers to aggregate their health records on their iPhone using FHIR Health insurance companies are exploring applications of FHIR to improve service and communication with their providers and patients SureScripts the national e Prescribing network is using FHIR to help doctors know if their patients are complying with prescriptions This textbook is for introductory health informatics courses for computer science and health sciences students e g doctors nurses PhDs the current health informatics community IT professionals interested in learning about the field and practicing healthcare providers Though this textbook covers an important new technology it is accessible to non technical readers including healthcare providers their patients or anyone interested in the use of healthcare data for improved care public population health or research [Health informatics The Ultimate Step-By-Step Guide](#) Gerardus Blokdyk, [Health Informatics on FHIR: How HL7's API is Transforming Healthcare](#) Mark L.
